Biomedical Research and Computer Application in Manned Space Flight United States. National Aeronautics and Space Administration. Technology Utilization Office, 1971. Technology Utilization Program designed to transfer technological developments that may have useful commercial applications. From NASA laboratories and contractors, aeronautics and space-related technology is gathered and evaluated. Items which have potential industrial use are made generally available. This survey of computer uses in the field of medicine is one of a series of NASA publications that presents information of direct or indirect interest to the non-aerospace community. This report summarizes the areas of medicine in which computers can be employed and examines in detail several cases where computers have been applied in connection with the medical aspects of NASA's manned space flight program. Treated are such problems as those of automated medical data storage and retrieval systems, continuous monitoring and interpretation of electrocardiograms, and computer-aided medical diagnosis. The approach is cautious throughout, with the emphasis almost constantly on ways to permit the computer to perform various clerical functions while leaving critical decisions to a human.
