Acta Neurochirurgica:

Primary and Secondary Brain Stem Lesions György Csecsei, Oskar Hoffmann, Norfrid Klug, Albrecht Laun, Robert Schönmayr, Jan Zierski, 1987-12-21 This volume is the first to describe all clinically and experimental relevant aspects of primary and secondary brain stem lesions important to clinicians. It contains a detailed description of the computer tomographical and morphological changes of the cerebral cisterns in acutely and chronically increased intracranial pressure. The prognostic value of clinical parameters of primary and secondary brain stem lesions is demonstrated. The possibilities of assessing the clinical course by computer aided evaluation are presented. In addition to that comprehensive view of morphological radiological and clinical findings extensive investigation concerning blink reflex BR and auditory evoked brain stem potentials BAEP supply highly relevant functional aspects of those lesions. The effects of raised intracranial pressure upon BR BAEP as well as upon cerebral blood flow and focal flow in different brain areas were studied in animal experiments and reveal new and fascinating conclusions. Based on these investigations a mathematical model following modern concepts of system analysis was developed. The model includes the intracranial system autoregulation of cerebral flow cardiovascular components and the short time behaviour of arterial blood pressure regulation.

Neurosurgery and Medical Ethics H. August van Alphen, 2012-12-06 This supplement of *Acta Neurochirurgica* contains the proceedings of the Ninth Convention of the Academia Eurasiana Neurochirurgica held in Chateau St Gerlach Houthem The Netherlands 29 July-1 August 1998. During this convention a three day symposium on Neurosurgery and Medical Ethics was held. In this time of tremendous technical advancement in medicine in general and neurosurgery in particular we are liable to lose sight of the sick patient as a human being and the odds are that he will be the object rather than the subject of our action in the near future. It is a purpose and a task of the Academia Eurasiana Neurochirurgica to recognize this thread and to pay attention to tradition morality and ethics in neurological surgery. The theme of this convention and the subject of the symposium met this purpose as no other. In the scientific sessions during the first day the moral backgrounds of medical ethics in the most important cultures and religions in east and west were elucidated by invited experts in this field. A mutual respectful understanding of each other's conception of and belief in ethical principles is a growing necessity in our multicultural societies in both continents. On the second day the ethical aspects of different fields of neurological surgery were discussed by members of the Academia. In this context also the

internationally much discussed and much criticized regulations on euthanasia in The Netherlands were explained

Neurochirurgia ,1991 Cécile and Oskar Vogt: The Visionaries of Modern Neuroscience I. Klatzo,2002-07-16 Human greatness has many connotations Since the requirements for membership in this category are vague and poorly defined admittance to the Mount Olympus is frequently erratic and subjective especially in view of a wide penumbra zone of border cases Nevertheless rising above a twilight zone of debatable cases there are individuals whose right for membership is unquestionable In science one of the unequivocal criteria for greatness relates to how far one's scientific achievement affects the opening of new horizons and points to directions for future development and progress Unveiling new visions can derive only from creative people who conceive original ideas and concepts and who are daring enough to promote them against the indifference or opposition of the establishment Maintaining the integrity and the faith to one's own ideals may require extraordinary strength of character up to courting persecution or even death as happened in the middle ages and more recently in the first half of this century with regard to Cecile and Oskar Vogt whose lives and accomplishments are described in this book Thus the greatness of the Vogts is based both on their penetrating vision of the future for brain research and on the sterling quality of their character which sustained a test of fire during the Nazi years in Germany
