

What does it feel like to think of the size of numbers, shapes, money, time, and more? When formed from the experiences they have with the things they are interested in, concepts become, in children's hands, of control. When we consider children thinking more flexibly and perhaps in ways that move them past initial concepts, these misconceptions often persist and are compounded throughout their elementary years.

How can we connect the informal knowledge that students bring to our classrooms with the mathematics program adopted by our school system? Just as important, how do we ensure that the mathematics we are introducing and reinforcing is accurate and will not need to be taught again later?

This companion resource to *Math Misconceptions* presents these questions by providing explicit instructional ideas and engaging activities that can be implemented at any time. Aligned with the NCTM Standards, *Activities to Undo Math Misconceptions* includes:

- ✓ address the most common errors found in each of the five NCTM content strands
- ✓ offer numerous instructional ideas ("What is It?" for connecting common errors and presenting misconceptions from children)
- ✓ include teaching moves for more than 10 activities and pose questions to assistfully support how you discuss these with students
- ✓ help guide your formative assessment with suggested "Look For" evidence work through the activities.

The downloadable resources include printable versions of the five NCTM content strands and specific offerings you can customize for students in your particular classroom.

Through your students' math misconceptions, this practical guide to error will help make all math more meaningful and relevant to your classroom.
