

The background of the cover is a photograph of a landscape. In the upper half, a bright sun is low on the horizon, creating a lens flare and casting a warm glow over a body of water. The sky is a mix of orange and yellow. In the foreground, the dark silhouettes of trees and bushes are visible against the lighter background. The overall mood is serene and natural.

A Primer for Environmental Literacy Frank B. Golley, 1998-01-01 This text presents the key concepts of environmental science for those who are not natural scientists It offers a way to improve environmental literacy the capacity to understand the connections between humans and their environment There are reading lists for each topic covered *A Primer for Environmental Literacy* Frank B. Golley, 1998 Presents key concepts of environmental science in a style that can be understood by those who are not scientists Environmental History in the Making Estelita Vaz, Cristina Joanaz de Melo, Lígia M. Costa Pinto, 2016-10-13 This book is the product of the 2nd World Conference on Environmental History held in Guimarães Portugal in 2014 It gathers works by authors from the five continents addressing concerns raised by past events so as to provide information to help manage the present and the future It reveals how our cultural background and examples of past territorial intervention can help to combat political and cultural limitations through the common language of environmental benefits without disguising harmful past human interventions Considering that political ideologies such as socialism and capitalism as well as religion fail to offer global paradigms for common ground an environmentally positive discourse instead of an ecological determinism might serve as an umbrella common language to overcome blocking factors real or invented and avoid repeating ecological loss Therefore agency environmental speech and historical research are urgently needed in order to sustain environmental paradigms and overcome political cultural and economic interests in the public arena This book intertwines reflections on our bonds with landscapes processes of natural and scientific transfer across the globe the changing of ecosystems the way in which scientific knowledge has historically both accelerated destruction and allowed a better distribution of vital resources or as it in today's world can offer alternatives that avoid harming those same vital natural resources water soil and air In addition it shows the relevance of cultural factors both in the taming of nature in favor of human comfort and in the role of the environment matters in the forging of cultural identities which cannot be detached from technical intervention in the world In short the book firstly studies the past approaching it as a data set of how the environment has shaped culture secondly seeks to understand the present and thirdly assesses future perspectives what to keep what to change and what to dream anew considering that conventional solutions have not sufficed to protect life on our planet Human Ecology Frederick R. Steiner, 2016-02-16 Humans have always been influenced by natural landscapes and always will be even as we create ever larger cities and our developments fundamentally change the nature of the earth around us In *Human Ecology* noted city planner and landscape architect Frederick Steiner encourages us to consider how human cultures have been shaped by natural forces and how we might use this understanding to contribute to a future where both nature and people thrive Human ecology is the study of the interrelationships between humans and their environment drawing on diverse fields from biology and geography to sociology engineering and architecture Steiner admirably synthesizes these perspectives through the lens of landscape architecture a discipline that requires its

practitioners to consciously connect humans and their environments After laying out eight principles for understanding human ecology the book s chapters build from the smallest scale of connection our homes and expand to community scales regions nations and ultimately examine global relationships between people and nature In this age of climate change a new approach to planning and design is required to envision a livable future Human Ecology provides architects landscape architects urban designers and planners and students in those fields with timeless principles for new creative thinking about how their work can shape a vibrant resilient future for ourselves and our planet Selected Essays in Environmental Sciences and Management ,2006
