## Evolution

- Who are the two people who developed ideas about the theory of evolution? **Charles Darwin & Alfred Russel Wallace**
  - Charles Darwin = natural selection --> evolutionary change
- What **three principles** make natural selection inevitable?
  - (1) Most characteristics of organisms are inherited, or passed from parent to offspring
  - (2) More offspring are produced than are able to survive, so resources for survival and reproduction are limited
  - (3) Offspring may vary among each other in regard to their characteristics and those variations are inherited
- Define natural selection and describe how natural selection drives evolution.
  - **Natural selection** a.k.a "survival of the fittest": the more prolific reproduction of individuals with favorable traits that survive environmental change because of those traits; this leads to evolutionary change
- What is fitness?
  - **Fitness** = often quantitative = measured
  - **Relative fitness**: how an individual compares to the other organisms in the POPULATION
    - Determines which individuals are contributing additional offspring to the next generation; thus, how the population might evolve

What are the two indicators of fitness (Slide 22)

## Speciation

- The formation of new and distinct species in the course of evolution.
- Slide 18, watch JoVE video on speciation and diversity

## Evidence for Evolution

- Be familiar with all types of evidence of evolution. Slides 7, 8, 12, 13, and 14.
  - **Fossils**
  - **Anatomy and Embryology**
    - Homologous structures: the synonymous parts
    - Vestigial structures: structures that have no apparent function at all and appear to be residual (leftover) parts from a past common ancestor
  - **Convergent evolution**: similar traits evolve INDEPENDENTLY in species that do not share a recent common ancestry
  - **Divergent evolution**: when 2 species evolve in diverse directions FROM A COMMON POINT
  - **Embryology**: the study of the development of the anatomy of an organism to its adult form
  - **Biogeography**: the geographic distribution of organisms on the planet follows patterns that are best explained by evolution in conjunction with the movement of tectonic plates over geological time
