## **Body And Brain A Trophic Theory Of Neural Connections:**

*Body and Brain* Dale Purves, 1988 The major goal of developmental neurobiology is to understand how the nervous system is put together A central theme that has emerged from research in this field over the last several decades is the crucial role of trophic interactions in neural assembly and indeed throughout an animal's life Trophic which means nutritive refers to long term interdependencies between nerve cells and the cells they innervate The theory of trophic effects presented in this book offers an explanation of how the vertebrate nervous system is related to and regulated by the body it serves The theory rationalizes the nervous system's accommodation throughout life to the changing size and form of the body it tenants indicating the way connections between nerve cells change in response to stimuli as diverse as growth injury experience and natural selection Dale Purves a leading neurobiologist best known for his work on the formation and maintenance of synaptic connections presents this theory within the historical setting of earlier ideas about neural organization from Weiss's theory of functional reorganization to the chemoaffinity theory championed by Sperry In addition to illuminating eighty years of work on trophic interactions this book asks its own compelling questions Are trophic interactions characteristic of all animals or only of those with complex nervous systems Are trophic interactions related to learning What does the trophic theory of neural connections imply about the currently fashionable view that the nervous system operates according to Darwinian principles Purves lays the theoretical foundation for practical exploration of trophic interactions as they apply to neural connections a pursuit that will help us understand how our own nervous systems generate change The ideas in this book not only enrich neurobiology but also convey the profound relevance of neuroscience to other fields of life science

**Brains** Dale Purves, 2010-01-08 For 50 years the world's most brilliant neuroscientists have struggled to understand how human brains really work Today says Dale Purves the dominant research agenda may have taken us as far as it can and neuroscientists may be approaching a paradigm shift In this highly personal book Purves reveals how we got to this point and offers his notion of where neuroscience may be headed next Purves guides you through a half century of the most influential ideas in neuroscience and introduces the extraordinary scientists and physicians who created and tested them Purves offers a critical assessment of the paths that neuroscience research has taken their successes and their limitations and then introduces an alternative approach for thinking about brains Building on new research on visual perception he shows why common ideas about brain networks can't be right and uncovers the factors that determine our subjective experience The resulting insights offer a deeper understanding of what it means to be human Why we need a better conception of what brains are trying to do and how they do it Approaches to understanding the brain over the past several decades may be at an impasse The surprising lessons that can be learned from what we see How complex neural processes owe more to trial and error experience than to logical principles Brains and the people who think about them Meet some of the extraordinary individuals who've shaped neuroscience The ghost in the machine problem The ideas presented
