George Touliatos, 2020-05-09 Hippocrates the father of modern medicine used to say Make food your medication while in Modern Greek we use the expression Eat to stay alive do not live for eating Food and nutrition are vital for living but it may become a sword edge Pleasure of food lasts few seconds until it passes down to stomach whether you eat caviar or rusks Food can become a pleasure but I'm sure this is also subjective I'm sure athletes who follow a discipline life style enjoy eating healthy and nutritious foods while they avoid eating junk filled up with empty calories Proper nutrition is the basis to a good health in body and mind while poor eating habits can lead to chronic inflammatory diseases such as Metabolic syndrome and diabetes type two We all know that obesity is the result of chronic insulin release from calories and also hyperglycemic carbohydrates refined sugars Americans say we are what we eat and are absolutely right We work out for an hour we sleep eight so the rest of fifteen hours we just eat This shows the significance of nutrition over training So this majorly reflects on how we're going to look based on what we eat throughout those hours So we eat garbage we're going to look flabby by we eat clean and healthy we're going to look lean It doesn't matter only how much we eat number of calories but also the origin of these quality and of course the frequency of meals the timing we consume certain micronutrients even the particular order we consume these macronutrients Lee Haney eight time Mr Olympia 1984 1991 said that in bodybuilding proper nutrition is 70% of success However he pointed out the significance of that 30% that belongs to training Today's beauty standards have as ideal body the aesthetically shaped the kind of underweight the slim and skinny But this doesn't mean without clothes this body is ideal I'm familiar with quite many female runway models at 50kg of bodyweight full of cellulitis We have to differentiate between a thin silhouette and a masculine physique Muscles occupy less space they look hard and beautiful Unlike fat that occupies space and jiggles looking flabby and smooth Fashion designers frequently say that the best clothing is a nice looking body It's you that you're wearing the clothes not the cloth that wears you People who carry muscles shouldn't worry about their bodyweight and definitely they don't obey to BMI formulas Instead they rely on mirrors and midsection measurements What matters mostly is subcutaneous body fat percentage hidden under the skin This is the reason bodybuilders have a tiny waist unlike a not trained man with same bodyweight Fat also floats and this is why obese people float in the water while a bodybuilder sinks causing it to displace a much larger volume of water CONTENTS
