Advanced Polymer Composites and Polymers in the Civil Infrastructure L.C. Hollaway, 2001-07-12 In recent years the fabrication technologies for the production of advanced polymer composites have been revolutionised by sophisticated manufacturing techniques These methods have enabled polymer composite materials to produce good quality laminates with minimal voids and accurate fibre alignment This book familiarises and provides a background to the understanding and use of advanced polymer composites in the civil infrastructure numerous examples have been provided to illustrate the use and versatility of the material Furthermore the book discusses the current fabrication techniques design methods and formulae for the design of structural composite systems In addition it discusses the fundamentals of geosynthetics used in geotechnical engineering The book introduces the fibres and matrices that are used to manufacture composites their mechanical and in service properties and their long term loading characteristics all these properties are specifically associated with the construction industry The chapters then discuss the design aspects for all composite units as well as systems used for the renewal of civil infrastructure Finally the book demonstrated the unique possibilities of combining composites with conventional materials to form units in which the various materials making up the unit are loaded in the mode that specifically suits their mechanical characteristics

Advanced Polymer Composites and Polymers in the Civil Infrastructure Elsevier, 2016-01-11 **Advanced Polymer Composites and Polymers in the Civil Infrastructure** Lee Canning, 2030-01-11 Fibre polymer FRP composites are used to form civil engineering structural materials but they require scientific understanding from which design procedures may be developed The book will discuss the current and the recently developed construction FRP composites and their components Particular attention will be paid to their properties their design and their sustainable aspects It will illustrate how these materials are becoming major competitors to other established civil engineering materials The book will develop the uses in construction of FRP composite materials from hybrid structures formed by combining polymer composite materials and traditional construction materials to all FRP composite structures It will explore the utilisation of FRP composites in sustainable systems Bio composites and their components will be discussed in terms of buildings and structures Up to date theoretical experimental information provides guidance for designers in particular regarding Eurocodes while review of current limitations will enable academia to understand knowledge gaps that need to be filled Recent and wide ranging case studies provide practical examples and advice for clients and contractors to understand the benefits of FRP technology Sustainability aspects of FRP composites provides a Vital update to all professionals in a subject that is becoming more important partly due to regulation and that will continue to do so *Advanced Polymer Composites for Structural Applications in Construction* L C Hollaway, M.
