Advances In Computers High Performance Computing Volume 72:

Advances in Computers Marvin Zelkowitz, 2009-06-12 This is volume 72 of Advances in Computers a series that began back in 1960 and is the oldest continuing series chronicling the ever changing landscape of information technology Each year three volumes are produced which present approximately 20 chapters that describe the latest technology in the use of computers today In this volume 72 we present the current status in the development of a new generation of high performance computers The computer today has become ubiquitous with millions of machines being sold and discarded annually Powerful machines are produced for only a few hundred U S dollars and one of the problems faced by vendors of these machines is that due to the continuing adherence to Moore s law where the speed of such machines doubles about every 18 months we typically have more than enough computer power for our needs for word processing surfing the web or playing video games However the same cannot be said for applications that require large powerful machines Applications such as weather and climate prediction fluid flow for designing new airplanes or automobiles or nuclear plasma flow require as much computer power as we can provide and even that is not enough Today s machines operate at the teraflop level trillions of floating point operations per second and this book describes research into the petaflop region 1 015 FLOPS The six chapters provide an overview of current activities that will provide for the introduction of these machines in the years 2011 through 2015

Advances in Computers Marvin Zelkowitz, 2009-05-11 This is volume 75 of Advances in Computers This series which began publication in 1960 is the oldest continuously published anthology that chronicles the ever changing information technology field In these volumes we publish from 5 to 7 chapters three times per year that cover the latest changes to the design development use and implications of computer technology on society today In this present volume we present five chapters describing new technology affecting users of such machines In this volume we continue a theme presented last year in volume 72 High Performance Computing In volume 72 we described several research projects being conducted in the United States on the development of a new generation of high performance supercomputers
