Recent Advancements in Structural Equation Modeling (SEM): From Both Methodological and Application Perspectives Oi-Man Kwok, Mike W.-L. Cheung, Suzanne Jak, Ehri Ryu, Jerry Jun-Yu Wu, 2019-02-08 Structural equation modeling SEM is becoming the central and one of the most popular analytical tools in the social sciences Many classical and modern statistical techniques such as regression analysis path analysis confirmatory factor analysis and models with both measurement and structural components have been shown to fall under the umbrella of SEM Thus the flexibility of SEM makes it applicable to many research designs including experimental and non experimental data cross sectional and longitudinal data and multiple group and multilevel data In this eBook you will find 19 cutting edge papers from the Research Topic Recent Advancements in Structural Equation Modeling SEM These 19 papers cover a wide variety of topics related to SEM including a analysis of different types of data from cross sectional data with floor effects to complex survey data and longitudinal data b measurement related issues from the development of new scale to the evaluation of person fit and new ways to test measurement invariance and c technical advancement and software development We hope that the readers will gain new perspectives and be able to apply some of the new techniques and models discussed in these 19 papers

Recent Developments on Structural Equation Models Kees van Montfort, Johan Oud, Albert Satorra, 2004-04-30 After Karl J reskog s first presentation in 1970 Structural Equation Modelling or SEM has become a main statistical tool in many fields of science It is the standard approach of factor analytic and causal modelling in such diverse fields as sociology education psychology economics management and medical sciences In addition to an extension of its application area Structural Equation Modelling also features a continual renewal and extension of its theoretical background The sixteen contributions to this book written by experts from many countries present important new developments and interesting applications in Structural Equation Modelling The book addresses methodologists and statisticians professionally dealing with Structural Equation Modelling to enhance their knowledge of the type of models covered and the technical problems involved in their

formulation In addition the book offers applied researchers new ideas about the use of Structural Equation Modeling in solving their problems Finally methodologists mathematicians and applied researchers alike are addressed who simply want to update their knowledge of recent approaches in data analysis and mathematical modelling
