

A UNIFIED SYSTEM FOR PCB DESIGN

Altium Designer® provides a unified PCB design environment to implement your entire PCB design process from concept through manufacturing. A modern user interface makes it easy to learn and enjoyable for daily use.

The unified workflow in Altium Designer provides a consistent user experience throughout the entire product creation process while maintaining a single, secure dataset. You get uninterrupted workflow from schematic capture, board construction, routing, ECAD data management, component management, and project release management without the error-prone practice of transferring files between design tools.

Additional products can be added to enhance functionality through the Altium Extensions platform. Extensions are analogous to apps on your cell phone and provide specialized capability, such as power integrity analysis.

Automation helps minimize the tedious parts of the job and powerful NATIVE 3D™ MCAD® CAD integration makes your digital designs look as real and accurate as the finished product. With Altium Designer, PCB design is the main focus, so you can spend less time worrying about projects and more time on design.

Altium Designer leverages over 30 years of EDA software development to provide innovative technologies, spanning from schematic capture to NATIVE 3D rigid-flex board layout and design.

SCHEMATIC CAPTURE

Every PCB design depends on accurate schematics. Whether you are starting from scratch or working on existing designs, Schematic Capture is fast and intuitive with the modern user interface. Import designs from PCB design packages and get started on your existing designs immediately. Altium Designer maintains a two-way connection between your schematics and PCB to provide a unified interface throughout the design process, improving productivity and enabling cross-referencing between schematic and PCB layout.

Design Importers

Being able to leverage previous designs is important for every company. Save time re-creating schematics, board layouts, and associated design data with an automatic importer of project files from P-CAD®, EAGLE®, ORCAD®, PADLOCK®, Expedition® v10, Designer, Expedition® Enterprise, CADSTAR®, and Allegro®.™ You don't have to lose any of your hard work and you can finish working on designs in a unified system.

Dynamic Cross Probing

With cross-probing, when you select an object on schematic, that same object is selected on your PCB and vice versa. Cross probing automatically cross-references every net, pin, and component on your PCB to give you the clearest insight into the implementation of your schematics. Quickly navigate between multiple files in your design project with cross-referencing for every design object and see the results in real time in the same design environment.
