marketing while upholding ethical standards [The DevOps Handbook](#) Gene Kim, Jez Humble, Patrick Debois, John Willis, 2016-10-06 Increase profitability, elevate work culture and exceed productivity goals through DevOps practices. More than ever, the effective management of technology is critical for business competitiveness. For decades, technology leaders have struggled to balance agility, reliability and security. The consequences of failure have never been greater, whether it's the healthcare.gov debacle, cardholder data breaches or missing the boat with Big Data in the cloud. And yet, high performers using DevOps principles such as Google, Amazon, Facebook, Etsy and Netflix are routinely and reliably deploying code into production hundreds or even thousands of times per day. Following in the footsteps of *The Phoenix Project*, *The DevOps Handbook* shows leaders how to replicate these incredible outcomes by showing how to integrate Product Management, Development, QA, IT Operations and Information Security to elevate your company and win in the marketplace. [Comprehensive Approach on Sentiment Analysis & Prediction](#) Manu Banga, 2023-01-23 Document in the subject Computer Sciences Artificial Intelligence language English abstract In today scenario there is abrupt usage of microblogging sites such as Twitter for sharing of feelings and emotions towards any current hot topic, any product, services or any event. Such opinionated data needs to be leveraged effectively to get valuable insight from that data. This research work focused on designing a comprehensive feature based Twitter Sentiment Analysis (TSA) framework using the supervised machine learning approach with integrated sophisticated negation handling approach and knowledge based Tweet Normalization System (TNS). We generated three real time twitter datasets using search operators such as Demonetization, Lockdown and 9pm9minutes and also used one publically available benchmark dataset SemEval 2013 to assess the viability of our comprehensive feature based twitter sentiment analysis system on tweets. We leveraged varieties of features such as lexicon based features, pos based morphological ngrams, negation and cluster based features to ascertain which classifier works well with which feature group. We employed three state of the art classifiers including Support Vector Machine (SVM), Decision Tree Classifier (DTC) and Naive Bayesian (NB) for our twitter sentiment analysis framework. We observed SVM to be the best performing classifier across all the twitter datasets except 9pm9minutes. DTC turned out to be the best for this dataset. Moreover, our SVM model trained on the SemEval 2013 training dataset outperformed the winning team NRC Canada of SemEval 2013 task 2 in terms of macro averaged F1 score averaged on positive and negative classes only. Though state of the art twitter sentiment analysis systems reported significant performance, it is still challenging to deal with some critical aspects such as negation and tweet normalization.
