

Chapter 22: Plant Responses to Internal and External Signals

Concept 32.2 Signal transduction pathways that signal recognition for integration

This concept brings together the general ideas on cell communication from Chapter 11 with specific examples of signal transduction in plants. As with animals, plants have receptors that trigger signal transduction pathways when activated. Let's begin with a review of three steps in signal transduction:

Step 7: Reception: Cell signals are detected by receptors that undergo changes in shape in response to a specific stimulus.

Step 2: Transduction. Transduction is a multiplying pathway that amplifies the signal. This effect allows a small number of signal molecules to produce a large cellular response.

Step 3: Responses: Cellular responses to primarily accomplished by these mechanisms:

- b. increasing or decreasing without production
- b. activating existing enzyme molecules

1. Have you ever seen a shriveled potato sending out skinny, pale sprouts? What is this called?
2. If you move the potato into the light, the sprout will respond by forming short, sturdy stems and broad, green leaves. What is this response to light called?
3. The figure below gives a specific example of a signal transduction in plants for the gravitropic or anti-phototaxis response described above. Label these parts of the Figure: reception, transduction, response, phototropism, signal, Ca^{2+} channel, second messenger (cGMP), protein kinase, transducin, G-protein, and ERK4.

Ap Biology Reading Guide Answers Chapter 39:

Stem Cell Biology and Tissue Engineering in Dental Sciences Ajaykumar Vishwakarma, Paul Sharpe, Songtao Shi, Murugan Ramalingam, 2014-11-05 Stem Cell Biology and Tissue Engineering in Dental Sciences bridges the gap left by many tissue engineering and stem cell biology titles to highlight the significance of translational research in this field in the medical sciences. It compiles basic developmental biology with keen focus on cell and matrix biology, stem cells with relevance to tissue engineering biomaterials including nanotechnology and current applications in various disciplines of dental sciences viz periodontology, endodontics, oral, craniofacial surgery, dental implantology, orthodontics, dentofacial orthopedics, organ engineering and transplant medicine. In addition, it covers research ethics, laws and industrial pitfalls that are of particular importance for the future production of tissue constructs. Tissue Engineering is an interdisciplinary field of biomedical research which combines life engineering and materials sciences to progress the maintenance, repair and replacement of diseased and damaged tissues. This ever-emerging area of research applies an understanding of normal tissue physiology to develop novel biomaterial, acellular and cell-based technologies for clinical and non-clinical applications. As evident in numerous medical disciplines, tissue engineering strategies are now being increasingly developed and evaluated as potential routine therapies for oral and craniofacial tissue repair and regeneration. Diligently covers all the aspects related to stem cell biology and tissue engineering in dental sciences, basic science research, clinical application and commercialization. Provides detailed descriptions of new modern technologies, fabrication techniques employed in the fields of stem cells, biomaterials and tissue engineering research, including details of latest advances in nanotechnology. Includes a description of stem cell biology with details focused on oral and craniofacial stem cells and their potential research application throughout medicine. Print book is available and black and white and the ebook is in full color.
