Annual Catalog of the Western University of Pennsylvania, Year Ending ... University of Pittsburgh, Western University of Pennsylvania, 1921 *Supporting Learning Flow Through Integrative Technologies* Tsukasa Hirashima, Ulrich Hoppe, Shelley Shwu-Ching Young, 2007 Contains a range of issues related to using information technology for learning. This book indicates a move from local support of specific learning activities towards supporting learning and teaching processes in a broader context beyond single tools and individuals users considering user learner groups on different levels of granularity *Catalog* St. Ambrose College, 1929 Algebraic Semantics of Imperative Programs Joseph Goguen, Grant Malcolm, 1996 Algebraic Semantics of Imperative Programs presents a self contained and novel executable introduction to formal reasoning about imperative programs. The authors primary goal is to improve programming ability by improving intuition about what programs mean and how they run. The semantics of imperative programs is specified in a formal implemented notation the language OBJ this makes the semantics highly rigorous yet simple and provides support for the mechanical verification of program properties. OBJ was designed for algebraic semantics its declarations introduce symbols for sorts and functions its statements are equations and its computations are equational proofs. Thus an OBJ program is an equational theory and every OBJ computation proves some theorem about such a theory. This means that an OBJ program used for defining the semantics of a program already has a precise mathematical meaning. Moreover standard techniques for mechanizing equational reasoning can be used for verifying axioms that describe the effect of imperative programs on abstract machines. These axioms can then be used in mechanical proofs of properties of programs. Intended for advanced undergraduates or beginning graduate students Algebraic Semantics of Imperative Programs contains many examples and exercises in program verification all of which can be done in OBJ

In Part 3 of the Trilogy Characterising Locally Finite Groups Satisfying the Strong Sylow Theorem for the Prime p About the Strong Sylow Theorem for the Prime p in Simple Locally Finite Groups The Strong Sylow Theorem for the Prime p in Projective Special Linear Locally Finite Groups we continue the program begun in 10 to optimise along the way 1 its beautiful Theorem about the first type An of infinite families of finite simple groups step by step to further types by proving it for the second type A PSL n We start with proving the Conjecture 2 of 10 about the General Linear Groups over commutative locally finite fields stating that their rank is bounded in terms of their p uniqueness and then break down this insight to the Special Linear Groups and the Projective Special Linear PSL Groups over locally finite fields We close with suggestions for future research regarding the remaining five rank unbounded types the Classical Groups and the way 2 regarding the locally finite and p soluble groups and regarding

Algebraic Specification 2 Hartmut Ehrig, Bernd Mahr, 1989-12-28 Since the early seventies concepts of specification have become central in the whole area of computer science Especially algebraic specification techniques for abstract data types and software systems have gained considerable importance in recent years They have not only played a central role in the theory of data type specification but meanwhile have had a remarkable influence on programming language design system architectures and software tools and environments The fundamentals of algebraic specification lay a basis for teaching research and development in all those fields of computer science where algebraic techniques are the subject or are used with advantage on a conceptual level Such a basis however we do not regard to be a synopsis of all the different approaches and achievements but rather a consistently developed theory Such a theory should mainly emphasize elaboration of basic concepts from one point of view and in a rigorous way reach the state of the art in the field We understand fundamentals in this context as 1 Fundamentals in the sense of a carefully motivated introduction to algebraic specification which is understandable for computer scientists and mathematicians 2 Fundamentals in the sense of mathematical theories which are the basis for precise definitions constructions results and correctness proofs 3 Fundamentals in the sense of concepts from computer science which are introduced on a conceptual level and formalized in mathematical terms

unbounded ones of the 19 known families of finite simple groups Part 2 introduces a new scheme to describe the 19 families the family T of types defines the rank of each type and emphasises the role of Kegel covers This part presents a unified picture of known results and is the reason why our title starts with About We then apply new ideas to prove the conjecture for the alternating groups see Page ii Thereupon we remember Kegel covers and sequences Finally we suggest a plan how to prove the conjecture step by step which leads to further conjectures thereby unifying Sylow theory in locally finite simple groups with Sylow theory in locally finite and p soluble groups In Part 3 ISBN 978 3 7578 6001 1 of the Trilogy we continue the program begun in 10 to optimise along the way 1 its Theorem about the first type A_n of infinite families of finite simple groups step by step to further types by proving it for the second type A PSL_n We start with proving the Conjecture 2 of 10 about the General Linear Groups by using new ideas see Page ii and then break down this insight to the Special Linear and the PSL Groups We close with suggestions for future research regarding the remaining rank unbounded types the Classical Groups and the way 2 the locally finite and p soluble groups and Augustin Louis Cauchy's and variste Galois contributions to Sylow theory in finite groups
