Applied Linear Regression Models:

Applied Linear Regression Models John Neter, William Wasserman, Michael H. Kutner, 1989 Applied Linear Regression Models was listed in the newsletter of the Decision Sciences Institute as a classic in its field and a text that should be on every member's shelf. The third edition continues this tradition. It is a successful blend of theory and application. The authors have taken an applied approach and emphasize understanding concepts; this text demonstrates their approach through worked-out examples. Sufficient theory is provided so that applications of regression analysis can be carried out with understanding. John Neter is past president of the Decision Science Institute and Michael Kutner is a top statistician in the health and life sciences area. Applied Linear Regression Models should be sold into the one-term course that focuses on regression models and applications. This is likely to be required for undergraduate and graduate students majoring in allied health, business, economics, and life sciences.

Applied Linear Statistical Models John Neter, 1996 This text uses an applied approach with an emphasis on the understanding of concepts and exposition by means of examples. Sufficient theoretical information is provided to enable applications of regression analysis to be carried out. Case studies are used to illustrate many of the statistical methods. There is coverage of composite designs for response surface studies and an introduction to the use of computer-generated optimal designs. The Holm procedure is featured as well as the analysis of means of identifying important effects. This edition includes an expanded use of graphics: scatter plot matrices, three-dimensional rotating plots, paired comparison plots, three-dimensional response surface and contour plots, and conditional effects plots. An accompanying Student Solutions Manual works out problems in the text.

Applied Linear Regression Sanford Weisberg, 1985-08-14 Simple linear regression. Multiple regression. Drawing conclusions. Weighted least squares. Testing for lack of fit. General F tests and confidence ellipsoids. Diagnostics I: residuals and influence. Diagnostics II: symptoms and remedies. Model building I: defining new predictors. Model building II: collinearity and variable selection. Prediction. Incomplete data. Contents. Nonleast squares estimation. Generalizations of linear regression.
