How to Structurally Design a Concrete Slab Culvert? RC Slab Deck Design Using the FORTRAN-95 Program

Andinet Zeleke Bekele,2020-02-21 Master s Thesis from the year 2013 in the subject Engineering Civil Engineering grade Very Good A Addis Ababa University Addis Ababa University Institute of Technology course Structural Engineering language English abstract This thesis focuses on the development of a FORTRAN 95 program for the structural design of the superstructure part of a concrete slab culvert FORTRAN 95 is a programming language used in the fields of scientific numerical and engineering fields In this thesis this language has been used to develop the program for the structural design of reinforced concrete slab culvert deck The input data for at grade and at fill slab culverts are saved on a note pad in the external file folder which constitute the material properties geometric features and proposed diameter of reinforcement bars of the slab culvert and its deck in the folder which contains FORTRAN 95 program The output data is written on the note pad in the external folder based on the format assigned for each output in the folder which contains the design results of slab deck thickness and area spacing and length of main distribution and temperature reinforcement bars Besides Edge beam design parallel to the traffic is executed and shown in the output result by the developed program Concrete slab culvert is an important structure used to convey trucks and pedestrian along a road corridor or in one of a range of other situations This structure is highly constructed in highway road projects in Ethiopia In this study a FORTRAN program is developed for the structural design of reinforced concrete slab culvert deck according to the provisions given in AASHTO LRFD Bridge 2005 Edition The developed program is expected to assist the structural designers and users to design the superstructure part of a reinforced concrete slab culvert deck efficiently with great accuracy Both at grade and at fill slab deck thicknesses are computed according to the specification specified in AASHTO LRFD Bridge 2005 Edition The reinforcement bars are also designed based on the requirements specified in the code Within the context of this work the program is developed in four steps The first step is to define and analyze the problem the second step is to develop an optimal solution and designing the program the third step is coding the program and the final step is testing and documenting the program

Verification of LRFD Bridge Design and Analysis Software for Indot

Amit H. Varma,Jungil Seo,2009-08-15 NCHRP Process 12 50 was implemented to evaluate and verify composite steel I girder bridge design software used commonly in Indiana A test bed of twenty one bridges was developed with the guidance from an Indiana Department of Transportation appointed research advisory panel RAP The test bed included five simple span and sixteen multi span bridge superstructures More than 80 parameters were required to define a bridge and they include bridge span girder spacing number of beams section type steel

strength girder sections and other required bridge parameters. Some of these parameters were initially selected by INDOT and practitioners. An indigenous computer program PURDUE CSBD was developed to implement the bridge design calculations specified in the AASHTO LRFD specifications which is currently endorsed by the INDOT bridge design manual. Both MERLINDASH and PURDUE CSBD were used to generate design calculation results for the complete test bed of bridges. The output from both computer programs is compared to identify assumptions and discrepancies between MERLINDASH and the AASHTO LRFD specifications. These comparisons indicate excellent agreement between the results from both programs for 1 moments, 2 shears, 3 stresses, 4 deflections, 5 flexural strength and all relevant parameters, 6 shear strength and all relevant parameters and 7 shear connector related parameters. The test bed of bridge structures and the PURDUE CSBD program are recommended for evaluating and verifying other bridge design software.

LRFD Bridge Design Guide Specifications for GFRP-reinforced Concrete, 2018 **Design of Modern Highway Bridges** Narendra Taly, 1998. This text provides an introduction to the theory and practice of designing modern highway bridge superstructures. Beginning with the history of bridges it describes various types of bridge superstructures materials of construction bridge loadings and analysis techniques for various types. Implementation of LRFD Geotechnical Design for Bridge Foundations Naser Abu-Hejleh, 2011. This document is the reference manual for NHI training course No 132083 both developed to assist State Departments of Transportation DOTs in the successful development of LRFD Design Guidance for bridge foundations based on the 2010 AASHTO LRFD Bridge Design Specifications and their local experiences. Initially an LRFD Implementation Plan of six consecutive steps is discussed and the remainder of the manual presents recommendations to assist DOTs with implementation of these steps. The principal changes in the AASHTO design specifications from ASD to LRFD are presented. The DOTs have three options for selection of LRFD geotechnical design methods adoption of AASHTOs LRFD methods or development of local LRFD methods by fitting to ASD or through reliability analysis of information collected at load test sites. The calibration methods and conditions for these three options are discussed to assist DOTs in implementation of these options. Procedures are furnished to evaluate and address the project site variability. Then the three implementation options are evaluated and compared to assist DOTs with selection of the most appropriate option. The advantages of development of local reliability based LRFD design methods over other implementation options are demonstrated. The implementation of AASHTO LRFD for geotechnical design for bridge foundations will lead to savings or to equivalent foundation costs compared with ASD methods. At the end a roadmap for development of LRFD design guidance that consists of LRFD design specifications and delivery processes for bridge foundations is discussed.

Design and

Performance Verification of UHPC Piles for Deep Foundations Thomas L. Vande Voort, Muhannad T. Suleiman, Sri Sritharan, 2008 The strategic plan for bridge engineering issued by AASHTO in 2005 identified extending the service life and optimizing structural systems of bridges in the United States as two grand challenges in bridge engineering with the objective of producing safer bridges that have a minimum service life of 75 years and reduced maintenance cost Material deterioration was identified as one of the primary challenges to achieving the objective of extended life In substructural applications e g deep foundation construction materials such as timber steel and concrete are subjected to deterioration due to environmental impacts Using innovative and new materials for foundation applications makes the AASHTO objective of 75 years service life achievable Ultra High Performance Concrete UHPC with compressive strength of 180 MPa 26 000 psi and excellent durability has been used in superstructure applications but not in geotechnical and foundation applications This study explores the use of precast prestressed UHPC piles in future foundations of bridges and other structures An H shaped UHPC section which is 10 in 250 mm deep with weight similar to that of an HP 10x57 steel pile was designed to improve constructability and reduce cost In this project instrumented UHPC piles were cast and laboratory and field tests were conducted Laboratory tests were used to verify the moment curvature response of UHPC pile section In the field two UHPC piles have been successfully driven in glacial till clay soil and load tested under vertical and lateral loads This report provides a complete set of results for the field investigation conducted on UHPC H shaped piles Test results durability drivability and other material advantages over normal concrete and steel indicate that UHPC piles are a viable alternative to achieve the goals of AASHTO strategic plan **Structural Engineering Handbook, Fifth Edition** Mustafa Mahamid, Edwin H.
