

Mobile Traffic Information System Technical Reference Manual

I. Conceptual Design:

The basic objective of this project is to communicate with a private database through an application gateway. Wml is the interface to the end users, asp.Net is the application gateway to the database; and since it is a private database, php is used as a connection gateway.

The database contains a table of traffic information that has the following fields:

- 1) Location: a string up to 500 characters
- 2) Lane: a string up to 10 characters. Primarily a string representation of a number, but strings (i.e. left, right) are also accepted.
- 3) Date: the current date that the information was submitted
- 4) Time: the current EST that the information was submitted
- 5) Description: a string up to 500 characters. A brief description of the traffic incident.

II. Technology used:

Deck-It cell phone simulator
ASP.NET
MS SQL
PHP
WML

III. Communication roadmap:

Wml and php files reside on people.clemson.edu (referred to as people)

Asp.net and MS SQL reside on hogwarts.cs.clemson.edu (referred to as hogwarts)

Submitting to / Querying the private database:

- 1) Traffic.wml (people or any web server) takes input from cell phone end users and passes information using <postfield /> to --> traffic.php (people, a bridge between off-campus and hogwarts)
- 2) Traffic.php takes the data posted from traffic.wml and passes the exact same data (as it is only a connection bridge, it does not process the data), using
\$fp=fopen("http://my_mobilewebform.aspx?variable1=value1.&variable2==value2.", "r"); along to--> ASP.NET (hogwarts), where value1 and value2, etc are taken from traffic.wml and the date and time variables are read by date() function in php to pass current date and time to asp.NET, eventually to the database.
- 3) MobileWebForm1.aspx.cs file processes data posted from traffic.php and either:
 - a. writes data into --> MS SQL(hogwarts); writes an message based on the submission result;
