Optimization Gautam M. Appa, Leonidas Pitsoulis, H. Paul Williams, 2006-08-18 The primary reason for producing this book is to demonstrate and communicate the pervasive nature of Discrete Optimisation It has applications across a very wide

range of activities Many of the applications are only known to specialists Our aim is to rectify this It has long been recognized that modelling is as important if not more important a mathematical activity as designing algorithms for solving these discrete optimisation problems Nevertheless solving the resultant models is also often far from straightforward Although in recent years it has become viable to solve many large scale discrete optimisation problems some problems remain a challenge even as advances in mathematical methods hardware and software technology are constantly pushing the frontiers forward The subject brings together diverse areas of academic activity as well as diverse areas of applications To date the driving force has been Operational Research and Integer Programming as the major extension of the well developed subject of Linear Programming However the subject also brings results in Computer Science Graph Theory Logic and Combinatorics all of which are reflected in this book We have divided the chapters in this book into two parts one dealing with general methods in the modelling of discrete optimisation problems and one with specific applications The first chapter of this volume written by Paul Williams can be regarded as a basic introduction of how to model discrete optimisation problems as Mixed Integer Programmes and outlines the main methods of solving them

Innovations in Urban and Regional Systems Jean-Claude Thill, 2020-05-11 This book presents cutting edge research on urban and regional systems applying modern spatial analytical techniques of Geographic Information Science Technologies GIS T spatial statistics and location modeling The contributions written by leading scholars from around the globe adopt a spatially explicit analytical perspective and highlight methodological innovations and substantive breakthroughs on many facets of the socioeconomic and environmental reality of urban and regional contexts The book is divided into three parts The first part offers an introduction to the research field while the second part discusses critical issues in urban growth and urban management presenting case studies on city and urban environments their growth data infrastructures and spatial and management issues The third part then broadens the analysis to the regional scale addressing growth convergence and adaptation to new economic and information based realities This book appeals to scholars of spatial and regional sciences as well as to policy decision makers interested in advanced methods of spatial analysis location modeling and GIS T
