compares ideally rational and the naturalist approach used by this book which focuses on how actual agents chose their strategies and the effects of these strategies on model systems Part II explores a number of basic games using models in which agents have fixed strategies This section draws heavily on the substantial literature associated with the relevant application areas in the social sciences Part III reviews core results and applications of agent based models in which strategic interaction is present and for which design issues have genuine practical import This section draws heavily on the substantial literature associated with the application area to hand Part IV addresses miscellaneous topics in strategic interaction including lying in negotiations reasoning by backward induction and evolutionary models Modelled after the authors Agents Games and Evolution course at the University of Pennsylvania this book keeps mathematics to a minimum focusing on computational strategies and useful methods for dealing with a variety of situations
