Aviation Standard Practices Manual:

Competency-Based Education in Aviation Assoc Prof Tim Mavin, Dr Steven Hodge, Dr Suzanne K Kearns, 2016-01-28

Whether a trainee is studying air traffic control piloting maintenance engineering or cabin crew they must complete a set number of training hours before being licensed or certified. The aviation industry is moving away from an hours based to a competency based training system. Within this approach training is complete when a learner can demonstrate competent performance. Training based on competency is an increasingly popular approach in aviation. It allows for an alternate means of compliance with international regulations which can result in shorter and more efficient training programs. However there are also challenges with a competency based approach. The definition of competency based education can be confusing. Training can be reductionist and artificially simplistic. Professional interpretation of written competencies can vary between individuals and this approach can have a high administrative and regulatory burden. Competency Based Education in Aviation Exploring Alternate Training Pathways explores this approach to training in great detail considering the four aviation professional groups of air traffic control pilots maintenance engineers and cabin crew. Aviation training experts were interviewed and have contributed professional insights along with personal stories and anecdotes associated with competency based approaches in their fields. Research based and practical strategies for the effective creation delivery and assessment of competency based education are described in detail.

Industrial Aviation Management Martin

Hinsch, 2018-09-07. This book outlines the structure and activities of companies in the European aviation industry. The focus is on the design production and maintenance of components assemblies engines and the aircraft itself. In contrast to other industries the technical aviation industry is subject to many specifics since its activities are highly regulated by the European Aviation Safety Agency EASA the National Aviation Authorities and by the aviation industry standard EN 9100. These regulations can influence the companies organization personnel qualification quality management systems as well as the provision of products and services. This book gives the reader a deeper up to date insight into today's quality and safety requirements for the modern aviation industry. Aviation specific interfaces and procedures are looked at from both the aviation legislation standpoint as well as from a practical operational perspective.
