*Laboratory Practice*, 1989      **The metabolic pathways and environmental controls of hydrocarbon biodegradation in marine ecosystems** Joel E. Kostka, Andreas P. Teske, Samantha B. Joye, Ian Head, 2015-05-15  
Biodegradation mediated by indigenous microbial communities is the ultimate fate of the majority of oil hydrocarbon that enters the marine environment The aim of this Research Topic is to highlight recent advances in our knowledge of the pathways and controls of microbially catalyzed hydrocarbon degradation in marine ecosystems with emphasis on the response of microbial communities to the Deepwater Horizon oil spill in the Gulf of Mexico In this Research Topic we encouraged original research and reviews on the ecology of hydrocarbon degrading bacteria the rates and mechanisms of biodegradation and the bioremediation of discharged oil under situ as well as near in situ conditions      **Innovation**, 2002

Molecular Biomarkers for Gastric Cancer, 2nd edition Kecheng Zhang,Seungwan Ryu , Fenglin Liu,2024-07-31 Gastric cancer GC represents a serious health problem on a global scale Despite some recent advances in the field the prognosis in GC remains poor A better understanding of molecular biology which would lead to improved treatment options is needed Many potential biomarkers of prognostic significance have been identified However inhibition of only HER2 protein has led to a modest survival benefit A deeper understanding of the pathogenesis and biological features of gastric cancer including the identification and characterization of diagnostic prognostic predictive and therapeutic biomarkers hopefully will provide improved clinical outcomes This Research Topic aims to provide a comprehensive overview on recent progress in emerging molecular biomarkers for gastric cancer We welcome the submission of Review and Original Research articles covering but not limited to the following topics 1 Novel diagnostic molecules to improve the early detection rate for gastric cancer 2 Novel prognostic molecules to stratify gastric cancer patients into different risk 3 Novel therapeutic biomarker which could serve as target for treating gastric cancer 4 Novel biomarker to predict chemotherapy response of gastric cancer patients

**Research and Development** ,2004 Photosynthesis Under Fluctuating Light Michele Grieco,Fiamma Longoni,Stefano Santabarbara,Jeremy Harbinson,2023-06-27 Photosynthesis is a fundamental process that drives almost all life on Earth and is the motor of agriculture and food production For several decades its basic functioning has been investigated mainly at steady state under constant illumination This approach was necessary to understand the basic mechanisms underlying the light reactions and carbon assimilation However this condition does not reflect the natural environment where plants experience changes in both the intensity and spectrum of irradiance in a wide range of time scales spanning from seconds to several hours In recent years it has become clear that the processes allowing the photosynthetic apparatus to adapt to changes in irradiance are of paramount importance to plant fitness and productivity Therefore increased research effort has been directed towards studying the regulation of photosynthetic activity under fluctuating light i e upon the variation of light intensity or light spectrum This is important for understanding how photosynthetic organisms cope with natural environmental conditions Fluctuating light itself constitutes a potentially stressful condition because depending on the scale of the fluctuation it can transiently generate extreme redox and transthylakoid potentials and forces the photosynthetic machinery to be re adjusted Not surprisingly plants have evolved several mechanisms allowing a prompt response to these normal environmental events In natural environments photosynthetic organisms often have to cope with fluctuating light while experiencing other kinds of stress such as heat nutrient deficiency drought and pathogen attacks Therefore the study of combined stresses is essential for understanding the acclimation to realistic environmental conditions
