Disease Thomas M. Weiger,Alex Dopico,Anton Hermann,2017-11-10 Maxi calcium activated potassium channels BK are an amazing category of ion channels which are found in cellular plasma membranes as well as in membranes of intracellular organelles The function of these channels is to repolarize any excited membrane by passing a potassium outward current in response to depolarization and or increase in local calcium levels Thus voltage and calcium ions are involved in gating the channel under physiological conditions This dual activation makes them perfect sensors for many cellular events that require integration between intracellular calcium levels and electrical signals A plethora of physiological and pathophysiological functions such as membrane hyperpolarization modulation of synaptic transmission hormone secretion or mental deficiencies vaso regulation epilepsies heart diseases myotonic dystrophies hypertension etc in almost all cells and tissues were reported for these channels BK channels are main targets for important ligands like alcohol and gaseous neurotransmitters such as NO CO or H₂S to name a few In the last years the molecular entities and mechanisms involved in modulation of BK channels have gained tremendous attention as the key role of these channels in cellular processes became increasingly recognized Indeed accessory proteins such as slob beta and gamma subunits all serve to modulate the channel gating characteristics Moreover channel subunit expression and function is further tuned by phosphorylation dephosphorylation processes redox mechanisms and the lipid microenvironment of the BK channel protein complex This e book contains structural and functional aspects of BK channels channel modulation by a variety of agents and cellular components as well as the channel's relevance in health and disease [Venoms, Animal and Microbial Toxins, Volume II](#) Jean-Marc Sabatier,Herve
