The more traditional approaches to the history and philosophy of science and technology continue as well and probably will continue as long as there are skillful practitioners such as Carl Hempel Ernest Nagel and their students. Finally there are still other approaches that address some of the technical problems arising when we try to provide an account of belief and of rational choice. These include efforts to provide logical frameworks within which we can make sense of these notions. This series will attempt to bring together work from all of these approaches to the history and philosophy of science and technology in the belief that each has something to add to our understanding. The volumes of this series have emerged either from lectures given by authors while they served as honorary visiting professors at the City College of New York or from conferences sponsored by that institution. The City College Program in the History and Philosophy of Science and Technology oversees and directs these lectures and conferences with the financial aid of the Association for Philosophy of Science, Psychotherapy and Ethics.

MARTIN TAMNY RAPHAEL STERN PREFACE

The papers in this collection stem largely from the conference Foundations: Logic, Language and Mathematics held at the Graduate Center of the City University of New York on 14-15 November 1980.

Feferman on Foundations Gerhard Jäger, Wilfried Sieg, 2018-04-04

This volume honours the life and work of Solomon Feferman, one of the most prominent mathematical logicians of the latter half of the 20th century. In the collection of essays presented here, researchers examine Feferman's work on mathematical as well as specific methodological and philosophical issues that tie into mathematics. Feferman's work was largely based in mathematical logic, namely model theory, set theory, proof theory, and computability theory, but also branched out into methodological and philosophical issues, making it well known beyond the borders of the mathematics community. With regard to methodological issues, Feferman supported concrete projects. On the one hand, these projects calibrate the proof-theoretic strength of subsystems of analysis and set theory and provide ways of overcoming the limitations imposed by Gödel's incompleteness theorems through appropriate conceptual expansions. On the other, they seek to identify novel axiomatic foundations for mathematical practice, truth theories, and category theory. In his philosophical research, Feferman explored questions such as: What is logic? and proposed particular positions regarding the foundations of mathematics, including for

example his conceptual structuralism The contributing authors of the volume examine all of the above issues Their papers are accompanied by an autobiography presented by Feferman that reflects on the evolution and intellectual contexts of his work The contributing authors critically examine Feferman s work and in part actively expand on his concrete mathematical projects The volume illuminates Feferman s distinctive work and in the process provides an enlightening perspective on the foundations of mathematics and logic *Axiomatic Thinking II* Fernando Ferreira, Reinhard Kahle, Giovanni

Sommaruga, 2022-09-17 In this two volume compilation of articles leading researchers reevaluate the success of Hilbert s axiomatic method which not only laid the foundations for our understanding of modern mathematics but also found applications in physics computer science and elsewhere The title takes its name from David Hilbert s seminal talk *Axiomatisches Denken* given at a meeting of the Swiss Mathematical Society in Zurich in 1917 This marked the beginning of Hilbert s return to his foundational studies which ultimately resulted in the establishment of proof theory as a new branch in the emerging field of mathematical logic Hilbert also used the opportunity to bring Paul Bernays back to G ttingen as his main collaborator in foundational studies in the years to come The contributions are addressed to mathematical and philosophical logicians but also to philosophers of science as well as physicists and computer scientists with an interest in foundations

Ways of Proof Theory Ralf Schindler, 2013-05-02 On the occasion of the retirement of Wolfram Pohlers the Institut f r Mathematische Logik und Grundlagenforschung of the University of M nster organized a colloquium and a workshop which took place July 17 19 2008 This event brought together proof theorists from many parts of the world who have been acting as teachers students and collaborators of Wolfram Pohlers and who have been shaping the field of proof theory over the years The present volume collects papers by the speakers of the colloquium and workshop and they produce a documentation of the state of the art of contemporary proof theory Hilbert's Programs and Beyond Wilfried

Sieg, 2013-01-24 Hilbert s Programs Beyond presents the foundational work of David Hilbert in a sequence of thematically organized essays They first trace the roots of Hilbert s work to the radical transformation of mathematics in the 19th century and bring out his pivotal role in creating mathematical logic and proof theory They then analyze techniques and results of classical proof theory as well as their dramatic expansion in modern proof theory This intellectual experience finally opens horizons for reflection on the nature of mathematics in the 21st century Sieg articulates his position of reductive structuralism and explores mathematical capacities via computational models *The Bulletin of Symbolic Logic* , 2009
