

Nature vs. Nurture

Biologists' 19th-century view of nature/nurture differences today proved enlightening. From the 1930s onwards, however, nature vs. nurture became a matter of the imagination. Nature's effects disappeared and it's difficult to see how nurture alone explains things. Nature has been "erasing" influence by this or that life experience and/or environment on the gene. However, from the 1970s onwards, scientists were astonished.

Epigenetics provides a far better story than nurture alone. Some people say they are "genetic" because they speak, behave, think, feel, and act. But what if they are not? Epigenetics shows that the environment can change the way genes are expressed. Epigenetics is the study of how the environment can change the way genes are expressed. Epigenetics is the study of how the environment can change the way genes are expressed. Epigenetics is the study of how the environment can change the way genes are expressed. Epigenetics is the study of how the environment can change the way genes are expressed.

It's hard to understand, as I'm sure you do, how the problem is so complex. The problem is that the environment can change the way genes are expressed. The problem is that the environment can change the way genes are expressed. The problem is that the environment can change the way genes are expressed. The problem is that the environment can change the way genes are expressed. The problem is that the environment can change the way genes are expressed. The problem is that the environment can change the way genes are expressed. The problem is that the environment can change the way genes are expressed. The problem is that the environment can change the way genes are expressed. The problem is that the environment can change the way genes are expressed.

However, epigenetics is not the only way to explain the problem. There are many other ways to explain the problem. There are many other ways to explain the problem. There are many other ways to explain the problem. There are many other ways to explain the problem. There are many other ways to explain the problem. There are many other ways to explain the problem. There are many other ways to explain the problem. There are many other ways to explain the problem. There are many other ways to explain the problem.

Conclusion

There is no simple answer and nature/nurture differences are complex. There is no simple answer and nature/nurture differences are complex.

utterance was in some way incorrect The two terms will be defined and looked into in more detail in the second chapter In the following the correlation between the nature vs nurture debate and language acquisition will be explained first The respective chapter provides a brief insight into how the nativist approach developed mainly based on Chomsky's 1988 notion of Universal Grammar UG and the type of criticism it brought along It further explains the connection between the respective theories and the grammatical aspect of language acquisition In the last section the main problems of experience based language learning will be displayed and defined The third chapter starts with a section dedicated to where the particular view that humans need innate structures for a correct knowledge of language stems from It continues with a detailed look on the no negative evidence problem The non existence of negative evidence and which role it plays in terms of language acquisition will be explored from different standpoints by nativists as well as non nativists
