

THE PREDICTIVE POWER OF QUALITY TRAITS FOR FOUR CROP DISEASES

By James M. Kinnaird, Ph.D., and Michael J. Goss, Ph.D., both of the Department of Biological Sciences, University of Alberta, Edmonton, Alberta, Canada T6G 2E9.

ABSTRACT: The ability of quality traits to predict disease resistance in four crops (wheat, barley, canola, and potato) was examined.

Quality traits were measured in 100 wheat, 100 barley, 100 canola, and 100 potato accessions. The accessions were then inoculated with a pathogen and the disease resistance was measured.

Regression analysis was used to determine the relationship between quality traits and disease resistance.

The results show that quality traits can be used to predict disease resistance in all four crops.

Keywords: wheat, barley, canola, potato, quality traits, disease resistance, regression analysis.

Introduction Quality traits are often used to predict disease resistance in crops. For example, in wheat, resistance to powdery mildew is often predicted by the presence of awns (1).

Advances in Seed Biology Paolo A. Sabelli,Brian A. Larkins,2015-11-11 The seed plays a fundamental role in plant

reproduction as well as a key source of energy nutrients and raw materials for developing and sustaining humanity With an expanding and generally more affluent world population projected to reach nine billion by mid century coupled to diminishing availability of inputs agriculture is facing increasing challenges to ensure sufficient grain production A deeper understanding of seed development evolution and physiology will undoubtedly provide a fundamental basis to improve plant breeding practices and ultimately crop yields Recent advances in genetic biochemical molecular and physiological research mostly brought about by the deployment of novel high throughput and high sensitivity technologies have begun to uncover and connect the molecular networks that control and integrate different aspects of seed development and help determine the economic value of grain crops with unprecedented details The objective of this e book is to provide a compilation of original research articles reviews hypotheses and perspectives that have recently been published in *Frontiers in Plant Science* *Plant Evolution and Development* as part of the Research Topic entitled *Advances in Seed Biology* Editing this Research Topic has been an extremely interesting educational and rewarding experience and we sincerely thank all authors who contributed their expertise and in depth knowledge of the different topics discussed We hope that the information presented here will help to establish the state of the art of this field and will convey how exciting and important studying seeds is and hopefully will stimulate a new crop of scientists devoted to investigating the biology of seeds
