Validation describes the procedures used to analyze pharmaceutical products so that the data generated will comply with the requirements of regulatory bodies of the US Canada Europe and Japan Calibration of Instruments describes the process of fixing checking or correcting the graduations of instruments so that they comply with those regulatory bodies This book provides a thorough explanation of both the fundamental and practical aspects of biopharmaceutical and bioanalytical methods validation It teaches the proper procedures for using the tools and analysis methods in a regulated lab setting Readers will learn the appropriate procedures for calibration of laboratory instrumentation and validation of analytical methods of analysis These procedures must be executed properly in all regulated laboratories including pharmaceutical and biopharmaceutical laboratories clinical testing laboratories hospitals medical offices and in food and cosmetic testing laboratories **Principles and Practices of Method Validation** Aleš

Fajgelj,Árpád Ambrus,2000 Analytical chemists and representatives of government agencies standards organizations and accreditation bodies involved in method validation gathered for an international workshop in November 1999 in Budapest to share experiences and work towards developing guidelines for validating analytical methods in general and specifically for determining pesticide and veterinary drug residues in food The 18 lectures include discussions of validating analytical data in a research and development environment the effects of sample processing on pesticide residues in fruits and vegetables estimating the significance of matrix induced chromatographic effects and a worked example for validating a multi residue method Annotation copyrighted by Book News Inc Portland OR *Development and Validation of Analytical Methods*

Christopher M. Riley,Thomas W. Rosanske,1996-05-29 The need to validate an analytical or bioanalytical method is encountered by analysts in the pharmaceutical industry on an almost daily basis because adequately validated methods are a necessity for approvable regulatory filings What constitutes a validated method however is subject to analyst interpretation because there is no universally accepted industry practice for assay validation This book is intended to serve as a guide to the analyst in terms of the issues and parameters that must be considered in the development and validation of analytical methods In addition to the critical issues surrounding method validation this book also deals with other related factors such as method development data acquisition automation cleaning validation and regulatory considerations The book is divided into three parts Part One comprising two chapters looks at some of the basic concepts of method validation Chapter 1 discusses the general concept of validation and its role in the process of transferring methods from laboratory to laboratory

Chapter 2 looks at some of the critical parameters included in a validation program and the various statistical treatments given to these parameters Part Two Chapters 3 4 and 5 of the book focuses on the regulatory perspective of analytical validation Chapter 3 discusses in some detail how validation is treated by various regulatory agencies around the world including the United States Canada the European Community Australia and Japan This chapter also discusses the International Conference on Harmonization ICH treatment of assay validation Chapters 4 and 5 cover the issues and various perspectives of the recent United States vs Barr Laboratories Inc case involving the retesting of samples Part Three Chapters 6 12 covers the development and validation of various analytical components of the pharmaceutical product development process This part of the book contains specific chapters dedicated to bulk drug substances and finished products dissolution studies robotics and automated workstations biotechnology products biological samples analytical methods for cleaning procedures and computer systems and computer aided validation Each chapter goes into some detail describing the critical development and related validation considerations for each topic This book is not intended to be a practical description of the analytical validation process but more of a guide to the critical parameters and considerations that must be attended to in a pharmaceutical development program Despite the existence of numerous guidelines including the recent attempts by the ICH to be implemented in 1998 the practical part of assay validation will always remain to a certain extent a matter of the personal preference of the analyst or company Nevertheless this book brings together the perspectives of several experts having extensive experience in different capacities in the pharmaceutical industry in an attempt to bring some consistency to analytical method development and validation
