Aquaponics is a hybrid of traditional food production systems that employs both aquaculture and hydroponics to grow food for personal consumption in a natural way Aquaculture is the practice of rearing fish in water whereas hydroponics is the practice of growing crops in water Both strategies are used in aquaponics to offer the necessary elements for each to be effective Aquaponics natural benefits in producing protein and veggies for a well balanced food source all at the same time is one of its best qualities In this book we highlight more information about What aquaponics is The benefits of aquaponics Why it fits your home The important elements and the growing medium The setups you can use Coming up with your own aquaponic garden Aquaponics is one of the most sustainable ways to grow food It involves a combination of aquaculture and hydroponics in one integrated system Once you're set up there's very little maintenance or effort required The basic premise of aquaponics is that the waste produced by your fish feeds the plants and the plants clean the water for the fish producing one continuous cycle

promote healthy living are usually absent in the food produced by industrial methods. The application of industrial methods in agriculture has shown that we cannot depend on it for long due to its unsustainability. Farm products are sharply decreasing in quality which results in deterioration of the health of individuals that consumes them and of course we all need to consume farm products to survive. These products now take a long time to get to the final consumer as a result of the many forms of packaging branding or storage processes they pass through. So when they finally get to us so many nutrients and essential elements may be absent and may no longer function to promote a healthy life. It is at our own risk if we keep on depending on industrial agriculture. It is high time everyone went back to the good old ways of natural agriculture. Currently it seems there is a strong shift in perception in the agricultural world as regards to industrial agriculture. People especially farmers are now seeing a plethora of reasons as to why there is a need to go back to natural farming methods. Localization is fast becoming the new movement. People are now encouraged to buy, sell, utilize and promote wide acceptance of agricultural products produced in their locality. To bring back localization in agriculture we can consider two ways in doing that either we go back to how it localization was done in the past or we utilize science and technology effectively. If we may go back to the old ways it means we must apply the methods of agriculture that have stood the trials of time and are still effective. In this case it involves the rejuvenation of conventional practices small organic farms that require a lot of work to be done on them. Going back to the old ways of agricultural practices requires proper land cultivation, the introduction of microorganisms in soils that will be beneficial to the growth of plants and employing farming strategies that encourage locals to farm together in unity. This book covers What Is Aquaponics, Why Should You Choose It, Difference with Hydroponics, Types of Aquaponic Systems, What Can Be Grown With the Aquaponic System, Common Mistakes and How to Avoid Them, Environmental Impact, Possible Pests, Interesting Facts about Aquaponics, Best Fish for Aquaponics, And much MORE.
