

What is ecosystem stability?

- The vast majority of natural ecosystems experience regular environmental change, or disturbances.
- Most ecologists describe **ecosystem stability** as the ability of an ecosystem to maintain its structure and function over long periods of time and despite disturbances.
- **Ecosystem structure** includes physical and geological structures of the landscape, the number and diversity of species present, the population sizes of those species, and the ways in which these populations interact.
- **Ecosystem function** refers to processes such as water and nutrient cycling and biomass productivity that the ecosystem provides.

A Companion to the Philosophy of Biology Sahotra Sarkar, Anya Plutynski, 2010-11-08 A COMPANION TO THE PHILOSOPHY OF BIOLOGY Sarkar is to be congratulated for assembling this talented team of philosophers who are themselves to be congratulated for writing these interesting essays on so many fascinating areas in philosophy of biology. This book will be a wonderful resource for future work Elliot Sober University of Wisconsin Madison Many of the discussions here start with a definition of terms and a historical context of the subject before delving into the deeper philosophical issues making it a useful reference for students of biology as well as philosophy Northeastern Naturalist The topics that are addressed are done so well This book will appeal to the advanced student and knowledgeable amateur and may prove useful catalyst for discussion among research teams or those engaged in cross disciplinary studies Reference Reviews A Companion to the Philosophy of Biology offers concise overviews of philosophical issues raised by all areas of biology Addressing both traditional and emerging areas of philosophical interest the volume focuses on the philosophical implications of evolutionary theory as well as key topics such as molecular biology immunology and ecology Comprising essays by top scholars in the field this volume is an authoritative guide for professional philosophers historians sociologists and biologists as well as an accessible reference work for students seeking to learn about this rapidly changing field

Ecological Stability, 1976

The term stability in its ecological context has been applied to populations communities and most recently to ecosystems with such an array of meanings that it has almost become a panchreston This review of selected literature points out the problems inherent in relying on either static measures e.g. species diversity connectivity or energy balance as a measure of complexity to arbitrarily rank the relative stabilities of ecosystems or the dynamic approach of analyzing the mathematical stability of linear or nonlinear models The research direction emphasized is that of development of new measures of ecosystem complexity based on ecosystem level characteristics e.g. nutrient retention or ecosystem metabolism and relating these measures of complexity to an a priori defined ecosystem stability

Designing Low Carbon Societies in Landscapes

Nobukazu Nakagoshi, Jhonamie A. Mabuhay, 2014-05-09 This book focuses on three major means of achieving a low carbon society conservation of the ecosystem complex changes of arrangement of landscapes and creation of biodiversity There are specific countermeasures to be taken for carbon absorption in the three types of landscapes urban cultural and natural because their carbon balances differ Urban landscapes are promising sites because they have the potential for greening and the creation of biodiversity Cultural landscapes in the tropics had not been actively researched until recently but this book now presents a collection of several cases focused on those areas Natural landscapes had existed in abundance in developing countries later nature protection areas were designated to coexist with development Now however developmental pressure has penetrated into those nature protection areas and landscape ecological projects are urgently required to preserve them As a result of

global warming abnormal weather phenomena including super typhoons have occurred frequently in recent years The major underlying cause is the higher concentration of greenhouse gases released by human activities As well major natural absorbers of CO₂ such as forests wetlands and coral reefs are shrinking and the human impact is causing the ecological balance to deteriorate Controlling CO₂ emissions and expanding the CO₂ absorbers are keys to reducing total CO₂ Low carbon societies can be established by maintaining the original CO₂ balance through integration of multiple tools with contributions from diverse fields such as physics and chemistry physiology and humanities and education On the basis of an international consensus the environment must be protected no matter what sacrifices are required As this book demonstrates achieving a low carbon society is a top priority and landscape conservation is the first step in ecological research toward that goal

networks for biodiversity protection and environmental management as well as their significance for planning It describes the concept of ecological networks and presents methods and real world examples of the use of a territorial system of ecological stability TSES in Slovakia at national regional and local levels including the assessment of the significance of biocentres biocorridors and interactive elements Using both a functional model for preserving the living conditions of habitats or preventing their collapse and the connectivity of biotopes in a landscape as an original type of ecological network based on landscape ecological principles TSES represents a modern concept of nature and biodiversity protection based on the principles of protection of the conditions and forms of biota

A Green and Permanent Land Randal S. Beeman,James A. Pritchard,2001 Once patronized primarily by the counterculture and the health food establishment the organic food industry today is a multi billion dollar business driven by ever growing consumer demand for safe food and greater public awareness of ecological issues Assumed by many to be a recent phenomenon that industry owes much to agricultural innovations that go back to the Dust Bowl era This book explores the roots and branches of alternative agricultural ideas in twentieth century America showing how ecological thought has challenged and changed agricultural theory practice and policy from the 1930s to the present It introduces us to the people and institutions who forged alternatives to industrialized agriculture through a deep concern for the enduring fertility of the soil a passionate commitment to human health and a strong advocacy of economic justice for farmers Randal Beeman and

James Pritchard show that agricultural issues were central to the rise of the environmental movement in the United States As family farms failed during the Depression a new kind of agriculture was championed based on the holistic approach taught by the emerging science of ecology Ecology influenced the permanent agriculture movement that advocated such radical concepts as long term land use planning comprehensive soil conservation and organic farming Then in the 1970s sustainable agriculture combined many of these ideas with new concerns about misguided technology and an over consumptive culture to preach a more sensible approach to farming In chronicling the overlooked history of alternative agriculture A Green and Permanent Land records the significant contributions of individuals like Rex Tugwell Hugh Bennett Louis Bromfield Edward Faulkner Russell and Kate Lord Scott and Helen Nearing Robert Rodale Wes Jackson and groups like Friends of the Land and the Practical Farmers of Iowa And by demonstrating how agriculture also remains central to the public interest especially in the face of climatic crises genetically altered crops and questionable uses of pesticides this book puts these issues in historical perspective and offers readers considerable food for thought **Ecological Stability** Robert Wayne Rutledge,1974 *Proceedings of International Meeting on the Use of Ecological Guidelines for Development in the American Humid Tropics, Held at Caracas, Venezuela, 20-22 February 1974 ,1975 **Ecology** ,1920*
