Comprehensive Supramolecular Chemistry II George W. Gokel, Len Barbour, 2017-06-22 Comprehensive Supramolecular Chemistry II Second Edition Nine Volume Set is a one stop shop that covers supramolecular chemistry a field that originated from the work of researchers in organic, inorganic and physical chemistry with some biological influence. The original edition was structured to reflect in part the origin of the field. However in the past two decades the field has changed a great deal as reflected in this new work that covers the general principles of supramolecular chemistry and molecular recognition, experimental and computational methods in supramolecular chemistry, supramolecular receptors, dynamic supramolecular chemistry, supramolecular engineering, crystallographic engineered assemblies, sensors, imaging agents, devices and the latest in nanotechnology. Each section begins with an introduction by an expert in the field who offers an initial perspective on the development of the field. Each article begins with outlining basic concepts before moving on to more advanced material. Contains content that begins with the basics before moving on to more complex concepts making it suitable for advanced undergraduates as well as academic researchers. Focuses on application of the theory in practice with particular focus on areas that have gained increasing importance in the 21st century including nanomedicine, nanotechnology and medicinal chemistry. Fully rewritten to make a completely up to date reference work that covers all the major advances that have taken place since the First Edition published in 1996.
