LKB Automatic or Manual Butterfly Valve

Concept

LKB is a sanitary, automatically or manually operated, butterfly valve for use in stainless steel pipe systems.

Working principle

LKB is either remote-controlled by means of an actuator or manually controlled by means of a handle.

The actuation is made in three standard positions, normally closed (NCO), normally open (NO) and fully activated (FA).

The actuation is designed so that an easy movement of a position is transformed into a 90° rotation of a shaft. The torque of the actuator is increased when the valve disc contacts the seat ring of the butterfly valve.

The handle for manual operation mechanically locks the valve in the open or closed position. The handle for the valve stops (DM120 and DM125), which are designed for locking in both intermediate positions, enable opening of the valve, so that the flow can be regulated.
