**Active Faults of the World** Robert S. Yeats, 2014-05-14 Active Faults of the World There is an ever increasing need for a better understanding of regional seismic hazards particularly in developing parts of the world where major building projects are planned and there is a huge migration of people to large cities that are at risk from earthquakes Disasters in recent times such as the earthquakes in Japan and Haiti are chilling proof of the dangers of building in active fault zones

**New England Earthquakes** John E. Ebel, 2019-03-01 New England and nearby areas in the United States and Canada have a long and storied history of earthquakes that goes back to the times of the earliest exploration and settlement of the region by Europeans This may come as a surprise to the many people living in the region today who have never felt a local earthquake Nevertheless not only is it true but there is every reason to believe that earthquakes including some damaging earthquakes will strike New England in the future In fact in the 1960s Boston Massachusetts was given the same seismic hazard rating as Los Angeles California because both had experienced strong earthquakes in their historic pasts Since then seismologists have learned much about the rates at which earthquakes occur throughout the country and about the effects of the earthquakes when they occur Today we know that the probability of damaging earthquake shaking in Boston is about twenty five times less than in Los Angeles Even so the threat of earthquakes in Boston throughout New England and in adjacent regions is one that cannot be ignored From the 1638 so called Pilgrim s Earthquake to anticipating what the future may hold John E Ebel introduces you to the surprising history of earthquakes in the northeast corridor
