**Fuzzy Logic Toolbox**, 2001 [Introduction to AI Techniques for Renewable Energy System](#) Suman Lata Tripathi, Mithilesh Kumar Dubey, Vinay Rishiwal, Sanjeevikumar Padmanaban, 2021-11-25 Introduction to AI techniques for Renewable Energy System Artificial Intelligence AI techniques play an essential role in modeling analysis and prediction of the performance and control of renewable energy. The algorithms used to model control or predict performances of the energy systems are complicated involving differential equations enormous computing power and time requirements. Instead of complex rules and mathematical routines AI techniques can learn critical information patterns within a multidimensional information domain. Design control and operation of renewable energy systems require a long term series of meteorological data such as solar radiation temperature or wind data. Such long term measurements are often non-existent for most of the interest locations or wherever they are available they suffer from several shortcomings like inferior quality of data and insufficient long series. The book focuses on AI techniques to overcome these problems. It summarizes commonly used AI methodologies in renewable energy with a particular emphasis on neural networks fuzzy logic and genetic algorithms. It outlines selected AI applications for renewable energy. In particular it discusses methods using the AI approach for prediction and modeling of solar radiation seizing performances and controls of the solar photovoltaic PV systems. Features Focuses on

a significant area of concern to develop a foundation for the implementation of renewable energy system with intelligent techniques Showcases how researchers working on renewable energy systems can correlate their work with intelligent and machine learning approaches Highlights international standards for intelligent renewable energy systems design reliability and maintenance Provides insights on solar cell biofuels wind and other renewable energy systems design and characterization including the equipment for smart energy systems This book which includes real life examples is aimed at undergraduate and graduate students and academicians studying AI techniques used in renewal energy systems Annual Meeting of the North American Fuzzy Information Processing Society--NAFIPS.
