### **Drain for Gain: Making Water Management**

**Worth its Salt** Henk Ritzema, 2026-02-02 Salinity affects 10 to 16% of all irrigated lands while the annual rate of land loss due to waterlogging and salinity is about 0.5 million hectares per year In this dissertation the role of subsurface drainage to reduce these problems in irrigated agriculture in arid and semi arid regions has been analysed and challenges for improving subsurface drainage practices have been formulated Although the installed subsurface drainage systems are in general technically sound and cost effective drainage development lags behind irrigation development and consequently a substantial part of the irrigated areas suffers from waterlogging and salinity This is mainly because the subsurface drainage systems are designed and implemented by government with the users the small farmers having little responsibility and having little input In the adopted top down approach the location specific conditions and farmers preferences are hardly taken into consideration Furthermore the emphasis has been on the technical aspects the physical infrastructure while the organizational aspects institutional infrastructure have been largely neglected To reverse the negative trend in salt build up and waterlogging in irrigated lands in semi arid and arid regions a number of challenges for enhancing the role of subsurface drainage have been formulated i balancing top down against bottom up ii from standardization to flexibility and iii focus on capacity development

**tribunaux civils de Paris pendant la Révolution (1791-1800)** ,1974 Agroecology Anand M. R.,Poojitha

Kommireddy,Seenappa C.,Kalyana Murthy K. N.,Ningaraju G. K.,2023-12-01 Agroecology literacy is the degree to which people have an objective and well informed understanding of crop production with environmental issues The increased food grain production has also increased the unscientific and indiscriminate use of agrochemicals which has affected the soil health and degraded agroecosystem adversely and brought down the immunity of soil and the productivity of crops In addition it has resulted in the over exploitation of soil leading to nutrient imbalance Moreover the negative impact of chemical agriculture on the environment and human health has been reported and documented Increased environmental awareness and health consciousness promoted scientists and planners to think about sustainable farming practices as an alternate way for healthy agriculture to protect the environment and human health Eco friendly methods or ecosystem services are one solution to manage this issue This book intends to provide the core elements of a curriculum for teaching agroecology at colleges and universities Print edition not for sale in India

Gender and Climate Change: An Introduction

Irene Dankelman,2012-06-25 Although climate change affects everybody it is not gender neutral It has significant social impacts and magnifies existing inequalities such as the disparity between women and men in their vulnerability and ability to cope with this global phenomenon This new textbook edited by one of the authors of the seminal Women and the Environment in the Third World Alliance for the Future 1988 which first exposed the links between environmental degradation and unequal impacts on women provides a comprehensive introduction to gender aspects of climate change Over 35 authors have contributed to the book It starts with a short history of the thinking and practice around gender and sustainable development over the past decades Next it provides a theoretical framework for analyzing climate change manifestations and policies from the perspective of gender and human security Drawing on new research the actual and potential effects of climate change on gender equality and women s vulnerabilities are examined both in rural and urban contexts This is illustrated with a rich range of case studies from all over the world and valuable lessons are drawn from these real experiences Too often women are primarily seen as victims of climate change and their positive roles as agents of

change and contributors to livelihood strategies are neglected. The book disputes this characterization and provides many examples of how women around the world organize and build resilience and adapt to climate change and the role they are playing in climate change mitigation. The final section looks at how far gender mainstreaming in climate mitigation and adaptation has advanced the policy frameworks in place and how we can move from policy to effective action. Accompanied by a wide range of references and key resources this book provides students and professionals with an essential comprehensive introduction to the gender aspects of climate change.
