

Each child and family encounter should include the communication of the following findings, needs, care or support for the care of children, and any necessary treatment planning from the health care team. These important health problems and any preventable conditions in a child may become longstanding problems and should therefore be treated and addressed. Any unique findings, conditions, or concerns will require a separate and focused assessment and support from additional care sites. Additionally, this may require secondary or concurrent support from other health care professionals. These recommendations represent a consensus by the American Academy of Pediatrics (AAP) and Bright Futures to help continue to emphasize the great importance of continuity of care in comprehensive health care services provided to children and adolescents.

Information on specific prevention topics is available in the Bright Futures Chapter 3: Tools & Tools for the Bright Futures Handbook for Health Supervision, Children and Adolescents, 2nd Edition, American Academy of Pediatrics, 2015. The recommendations in this document do not replace an evidence-based treatment or care as a standard of medical care. Instead, taking into account individual circumstances, may be appropriate. The Bright Futures Handbook for Health Supervision, Recommendations for Promoting Healthy Health-Care-Seeking Behaviors, is available online.
