**Roadside Design Guide** American Association of State Highway and Transportation Officials. Task Force for Roadside Safety, 2011 The Roadside Design Guide presents a synthesis of current information and operating practices related to roadside safety and is written in dual units metric and U S Customary This book is a guide It is not a standard nor is it a design policy It is intended to use as a resource document from which individual highway agencies can develop standards and policies Although much of the material in the guide can be considered universal in its application several recommendations are subjective in nature and may need modification to fit local conditions However it is important that significant deviations from the guide be based on operational experience and objective analysis The 2011 edition of the AASHTO Roadside Design Guide has been updated to include hardware that has met the evaluation criteria contained in the National Cooperative Highway Research Program NCHRP Report 350 Recommended Procedures for the Safety Performance Evaluation of Highway Features and begins to detail the most current evaluation criteria contained under the Manual for Assessing Safety Hardware 2009 MASH For the most part roadside hardware tested and accepted under older guidelines that are no longer applicable has not been excluded in this edition AASHTO website **Manual on Uniform Traffic Control Devices for Streets and Highways** United States. **Median Cross-section Design for Rural Divided Highways** Jerry L. Graham,Douglas W. Harwood,Karen R. Richard,Mitchell K. O'Laughlin,Eric T. Donnell,Sean N. **Clear Zone** T. H. Maze,Neal Hawkins,Christian Sax,2008 In urban communities there are often limited amounts of right of way available for establishing a large setback distance from the curb for fixed objects Urban communities must constantly weigh the cost of purchasing additional right of way for clear zones against the risk of fixed object crashes From 2004 to 2006 this type of crash on curbed roads represented 15% of all fatal crashes and 3% of all crashes in the state of Iowa Many states have kept the current minimum AASHTO recommendations as their minimum clear zone standards however other states have decided that these recommendations are insufficient and have increased the required minimum clear zone distance to better suit the judgment of local designers This report presents research on the effects of the clear zone on urban curbed streets The research was conducted in two phases The first phase involved a synthesis of practice that included a literature review and a survey of practices in jurisdictions that have developmental and historical patterns similar to those of Iowa The second phase involved investigating the benefits of a 10 ft clear zone which included examining urban corridors in Iowa that meet or do not meet the 10 ft clear zone goal The results of this study indicate that a consistent fixed object offset results in a reduction in the number of fixed object crashes a 5 ft clear zone is most effective when the goal is to minimize the number of fixed object crashes and a 3 ft clear zone is most effective when the goal is to minimize the cost of fixed object crashes

**The Art of Classic Planning** Nir Haim Buras,2020-01-28 An accomplished architect and urbanist goes back to the roots of what makes cities attractive and livable demonstrating how we can restore function and beauty to our urban spaces for the long term Nearly everything we treasure

in the world's most beautiful cities was built over a century ago. Cities like Prague, Paris, and Lisbon draw millions of visitors from around the world because of their exquisite architecture, walkable neighborhoods, and human scale. Yet a great deal of the knowledge and practice behind successful city planning has been abandoned over the last hundred years, not because of traffic, population growth, or other practical hurdles, but because of ill-considered theories emerging from Modernism and reactions to it. The errors of urban design over the last century are too great not to question. The solutions being offered today—sustainability, walkability, smart and green technologies—hint at what has been lost and what may be regained, but they remain piecemeal and superficial. In *The Art of Classic Planning*, architect and planner Nir Haim Buras documents and extends the time-tested and holistic practices that held sway before the reign of Modernism. With hundreds of full-color illustrations and photographs that will captivate architects, planners, administrators, and developers, *The Art of Classic Planning* restores and revitalizes the foundations of urban planning. Inspired by venerable cities like Kyoto, Vienna, and Venice, and by the great successes of L'Enfant's Washington, Haussmann's Paris, and Burnham's Chicago, Buras combines theory and a host of examples to arrive at clear guidelines for best practices in classic planning for today's world. *The Art of Classic Planning* celebrates the enduring principles of urban design and invites us to return to building beautiful cities.
