Three food types were analyzed for the presence of *Salmonella* by the AOAC culture method and by the International Organization for Standardization (ISO 6579:2002) culture method. Paired test portions of each food type were simultaneously analyzed by both methods. A total of 21 laboratories representing federal government agencies and private industry, in the United States and Europe, participated in this interlaboratory study. Foods were artificially contaminated with *Salmonella* and competing microflora if naturally contaminated sources were not available. No statistical differences ( $p < 0.05$ ) were observed between the AOAC and ISO culture methods for fresh cheese and dried egg products. A statistically significant difference was observed for one of the 2 lots of poultry from the first trial. The poultry meat used in this run was radiation sterilized, artificially contaminated with *Salmonella* and competitive flora, and then

lyophilized. A second trial was conducted with 2 separate lots of raw ground chicken that were naturally contaminated. The results from the second trial showed no statistical difference between the 2 culture methods. A third trial involving 4 laboratories was conducted on 2 separate lots of naturally contaminated raw poultry. Again, no statistically significant differences occurred. It is recommended that ISO 6579:2002 culture method for *Salmonella* be adopted Official First Action for the analysis of fresh cheese, fresh chilled and frozen poultry, and dried egg products.

Over several decades, standardized methods for detection of *Salmonella* in food and food ingredients have been independently developed in both the United States and Europe. Although the basic procedures are similar, differences exist in the specified media and incubation conditions. The rapidly increasing development of international commerce and the critical need for worldwide cooperation and exchange of data, particularly during the occurrence of a food contamination outbreak, necessitates harmonized testing standards worldwide for the detection of *Salmonella*.

A multilaboratory international collaborative validation study was conducted to demonstrate the equivalence of the

Submitted for publication December 2002.

The recommendation was approved by the Methods Committee on Microbiology and Extraneous Materials as First Action. See "Official Methods Program Actions," (2003) *Inside Laboratory Management*, March/April issue.
