Modelling of Pollutants in Complex Environmental Systems Grady Hanrahan, 2010 Environmental modelling has enjoyed a long tradition but there is a defined need to continually address both the power and the limitations of such models as well as their quantitative assessment. This book showcases modern environmental modelling methods, the basic theory behind them and their incorporation into complex environmental investigations. It highlights advanced computing technologies and how they have led to unprecedented and adaptive modelling, simulation and decision support tools to study complex environmental systems and how they can be applied to current environmental concerns. This volume is essential reading for researchers in academia, industry and government-related bodies who have a vested interest in all aspects of environmental modelling. Features include: A range of modern environmental modelling techniques are described by experts from around the world including the USA, Canada, Australia, Europe and Thailand; many examples from air, water, soil, sediment and biological matrices are covered in detail throughout the book; key chapters are included on modelling uncertainty and sensitivity analysis and a selection of figures are provided in full colour to enable greater comprehension of the topics discussed.

The Agricultural Policy Environmental eXtender (APEX) Model, 2009 The Agricultural Policy Environmental eXtender (APEX) model was developed by the Blacklands Research and Extension Center in Temple, Texas. APEX is a flexible and dynamic tool that is capable of simulating a wide array of management practices, cropping systems and other land use across a broad range of agricultural landscapes, including whole farms and small watersheds. The model can be configured for novel land management strategies such as filter strip impacts on pollutant losses from upslope croplands, intensive rotational grazing scenarios depicting movement of cows between paddocks, vegetated grassed waterways in combination with filter strip impacts and land application of manure removal from livestock feedlots or waste storage ponds. A description of the APEX model is provided, including an overview of all the major components in the model.

Applications of the model are then reviewed starting with livestock manure and other management scenarios performed for Livestock and the Environment A National Pilot Project NPP and then continuing with feedlot pesticide forestry buffer strip conservation practice and other management or land use scenarios performed at the plot field watershed or regional scale The application descriptions include a summary of calibration and or validation results obtained for the different NPP assessments as well as for other APEX simulation studies Available APEX Geographic Information System based or Windows based interfaces are also described as are forthcoming future improvements and additional research needs for the model
