Apoptosis Progress In Molecular And Subcellular Biology:

Apoptosis Y. Kuchino,W.E.G. Müller,2012-12-06 Apoptosis plays a central role in the regulation of cell proliferation Disruption of this control mechanism may cause serious human diseases such as encephalomyelitis and cancer Thus understanding of the molecular mechanisms of apoptotic cell death should lead to fundamental advances in the therapy of these diseases **Viruses and Apoptosis** Covadonga Alonso,2008-03-27 Using different viral models molecular pathways regulated by viral genes and their role in the pathogenesis of infection are analyzed The book also offers an update of known signaling pathways in apoptosis and their role in normal and infected cells Special emphasis is given to molecular pathways underlying viral transformation and oncogenesis and how research in this area is opening opportunities in cancer therapy

Thrombosis and Haemostasis ,2008 **Regulation of Alternative Splicing** Philippe Jeanteur,2013-03-14 The discovery in 1977 that genes are split into exons and introns has done away with the one gene one protein dogma Indeed the removal of introns from the primary RNA transcript is not necessarily straightforward since there may be optional pathways leading to different messenger RNAs and consequently to different proteins Examples of such an alternative splicing mechanism cover all fields of biology Moreover there are plenty of occurrences where deviant splicing can have pathological effects Despite the high number of specific cases of alternative splicing it was not until recently that the generality and extent of this phenomenon was fully appreciated A superficial reading of the preliminary sequence of the human genome published in 2001 led to the surprising and even deceiving to many scientists low number of genes around 32 000 which contrasted with the much higher figure around 150 000 which was previously envisioned Attempts to make a global assessment of the use of alternative splicing are recent and rely essentially on the comparison of genomic mRNA and EST sequences as reviewed by Thanaraj and Stamm in the first chapter of this volume Most recent estimates suggest that 40 60% of human genes might be alternatively spliced as opposed to about 22% for *C elegans* *Mammalian Chromosomes: Advances in Research and*
