A320 Flight Operation Manual:

Airbus A320 Crew Manual Facundo Conforti, 2020-03-11 In this manual you as a pilot will learn about main flight concepts and how the A320 works during normal and abnormal operations. This is not a technical manual about systems, it is a manual about flight philosophy. This manual is based on the original Airbus manual called The Flight Crew Training Manual which is published as a supplement to the Flight Crew Operating Manual (FCOM) and is designed to provide pilots with practical information on how to operate the Airbus aircraft. It should be read just like a supplement and not for real flight. In this case refer to the original FCOM from Airbus. Let's start to fly the amazing A320 with our collection of books and remember it is not a technical manual so enjoy it.

Man-Machine-Environment System Engineering Shengzhao

Long, Balbir S. Dhillon, 2017-08-21 These proceedings showcase the best papers selected from more than 500 submissions introducing readers to the top research topics and the latest developmental trends in the theory and application of Man Machine Environment System Engineering (MMESE). This research topic was first established in China by Professor Shengzhao Long in 1981 with direct support from one of the greatest modern Chinese scientists, Xuesen Qian. In a letter to Shengzhao Long from October 22nd 1993, Xuesen Qian wrote: 'You have created a very important modern science and technology in China. MMESE primarily focuses on the relationship between Man, Machine, and Environment, studying the optimum combination of related Man, Machine, and Environment systems. In this paradigm, Man refers to working people as the subject at the workplace, e.g. operators, decision makers. Machine is the general name for any object controlled by Man, including tools, machinery, computers, systems, and technologies. Environment describes the specific working conditions under which Man and Machine interact, e.g. temperature, noise, vibration, hazardous gases, etc. In turn, the three goals of optimization are to ensure safety, efficiency, and economy in this context. These proceedings present interdisciplinary studies on the concepts and methods of physiology, psychology, system engineering, computer science, environmental science, management, education, and other related disciplines. They offer a valuable resource for all researchers and professionals whose work involves interdisciplinary areas touching on MMESE subjects.'

Aviation and Its Management Arif Sikander, 2019-05-22 Aviation has grown leaps and bounds within the last decade. Aviation courses and training at all levels have shown an exponential increase around the globe. There has been a restricted focus on writing books in this sector of the economy mainly due to the shortage of expertise in this specialist and complex area. This book was written with the purpose of meeting this need of the aviation sector. Due to the diversified nature of aviation knowledge which includes flying, engineering, airports, allied trades for aircraft and airports, airline and airport management and operations, education, etc., one text alone will not suffice and do justice to address all these areas. It is envisaged to develop subsequent parts of this book to cover all these knowledge areas. This book is the first installment of any subsequent books and explores issues including airline management and operations, airline business models, airport systems, flight operational procedures, aircraft
