## Quantitative phytochemical analysis of selected medicinal plant species by using various organic solvents

**M. Madhu, V. Sailaja, TNVSS Satyadev, MV Satyanarayana**

### Abstract

In the present study, 10 medicinally important plant species were screened for their phytochemicals (quantitatively) by using 4 different solvent (water [AO], Acetone [AE], Petroleum Ether [PE] and chloroform [CP]) extracted from their selected parts (leaves, stem, petiole) of the fruit and seeds only leaves. All the plants which are selected for the study contains phytochemicals like alkaloids, flavonoids, steroids, phenols and saponins. The highest concentrations of alkaloids are observed in *Lantana* leaf and *F. indica* stem extracts by using PE. The highest amounts of flavonoids are seen in AO and PE extracts of *G. indica*, *D. curvata*, *S. supersonica*. The moderate concentrations of phenols are reported in AO and PE extracts of *L. officinale* and *S. supersonica* plant species. The high concentrations of steroids are reported in *S. supersonica* plant fruit petiole extract with PE. The high concentration of phytochemicals varied, when different organic solvents are used for the extraction procedure.

**Keywords:** Phytochemicals, medicinal plants, bioactive compounds, flavonoids, saponins.

### Introduction

Medical plants are plants containing built in active ingredients familiarized to cure disease and relieve from pain [1]. The use of traditional medicines and medicinal plants in mainly developing countries as remedial agents for the maintenance of health has been broadly observed [2]. Modern-day pharmacopoeia however contains at least 25% drugs derived from plants and many others, which are synthetic analogues, built on prototype chemical substances isolated from plants. Involvement in medicinal plants as a re-budding health assistance has been fuelled with the rising charges of prescription drugs in the safeguarding of generalized health and well being and the bio-prospecting of new plant derived drugs [3]. The ongoing development recognition regarding medicinal plants is due to various reasons; include increasing faith in herbal medicine [4]. On the top of that, an increasing dependence on the use of these medicinal plants in the industrialized organizations has been traced towards the extraction and development of drugs and chemo-therapeutics from these plants as well as from conventionally used herbal remedies [5]. The therapeutic properties of plants could be based on their anti-oxidant, anti-microbial, anti-pyretic effects of the phytochemicals constituents in them [6]. According to World Health Organization, medicinal plants would be the greatest source to obtain an array of drugs. Thus, such plants should be investigated to better understanding for their properties, safety practices in addition to usefulness [7].

In India, the ayurvedic system has features a numerous of such medicinal remedies on plants or plant products and the determination of their morphological, pharmacological or pharmacognostical characters can provide a better understanding of their active principle and mode of action. However a large number of tropical plants have not recently been studied in detail for their chemical constituents. So, in this regard we focused on phytochemical aspects in 10 selected indigenous plants of India: 1) *Garcinia indica* [G.I] (leaves); 2) *Jatropha curcas* [J.C] (leaves); 3) *Nigella sativa* [NS] (leaves); 4) *Lavandula officinalis* [L.O] (leaves); 5) *Dioscorea esculenta* [D.E] (leaves); 6) *Woodfordia fruticosa* [W.F] (stem); 7) *Vaccinium macrocarpon* [V.M] (leaves); 8) *Foeniculum vulgare* [F.V] (seeds); 9) *Sapindus saponaria* [S.S] (petiole); 10) *Annona squamosa* [A.S] (seeds).

### Materials and Methods

Brennan, 2013-04-01 Phytochemicals are plant derived chemicals which may bestow health benefits when consumed whether medicinally or as part of a balanced diet Given that plant foods are a major component of most diets worldwide it is unsurprising that these foods represent the greatest source of phytochemicals for most people Yet it is only relatively recently that due recognition has been given to the importance of phytochemicals in maintaining our health New evidence for the role of specific plant food phytochemicals in protecting against the onset of diseases such as cancers and heart disease is continually being put forward The increasing awareness of consumers of the link between diet and health has exponentially increased the number of scientific studies into the biological effects of these substances The Handbook of Plant Food Phytochemicals provides a comprehensive overview of the occurrence significance and factors effecting phytochemicals in plant foods A key objective of the book is to critically evaluate these aspects Evaluation of the evidence for and against the

quantifiable health benefits being imparted as expressed in terms of the reduction in the risk of disease conferred through the consumption of foods that are rich in phytochemicals. With world leading editors and contributors the *Handbook of Plant Food Phytochemicals* is an invaluable cutting edge resource for food scientists nutritionists and plant biochemists. It covers the processing techniques aimed at the production of phytochemical rich foods which can have a role in disease prevention making it ideal for both the food industry and those who are researching the health benefits of particular foods. Lecturers and advanced students will find it a helpful and readable guide to a constantly expanding subject area.
