[Technologies](#) Masaaki Okubo, 2020-01-07 The use of renewable energy is an effective solution for the prevention of global

warming On the other hand environmental plasmas are one of powerful means to solve global environmental problems on

nitrogen oxides NOx sulfur oxides SOx particulate matter PM volatile organic compounds VOC and carbon dioxides CO2 in

the atmosphere By combining both technologies we can develop an extremely effective environmental improvement

technology Based on this background a Special Issue of the journal Energies on plasma processes for renewable energy

technologies is planned On the issue we focus on environment plasma technologies that can effectively utilize renewable

electric energy sources such as photovoltaic power generation biofuel power generation wind turbine power generation etc

However any latest research results on plasma environmental improvement processes are welcome for submission We are

looking among others for papers on the following technical subjects in which either plasma can use renewable energy

sources or can be used for renewable energy technologies Plasma decomposition technology of harmful gases such as the

plasma denitrification method Plasma removal technology of harmful particles such as electrostatic precipitation Plasma

decomposition technology of harmful substances in liquid such as gas liquid interfacial plasma Plasma enhanced flow

induction and heat transfer enhancement technologies such as ionic wind device and plasma actuator Plasma enhanced
