Adapting To Climate Change Governance Challenges

Amrita G. Daniere,Diane Archer

Adapting To Climate Change Governance Challenges:

Adapting to Climate Change Peader Kirby, Deiric Ó Broin, 2016-01-04 Never before has humanity been faced with such a clear and stark choice either we continue our current greenhouse gas generating GHG intensive model of development and quickly make the world a grim and dangerous place for humans to live or we radically change our lifestyles forms of production and consumption mobility use of fossil fuels and cultural values to pull us back from the brink at the 11th hour A principal reason why actions taken so far have proved completely inadequate to address the gravity of the situation is that our institutions of governance are not up to the task Yet there has been little academic investigation of this issue and there has been a failure to identify the changes needed in our governance structures institutions and culture that might make them more fit for purpose In this book Irish academics officials and activists examine the issues at global national and local level highlighting the major challenges that climate change poses to our forms of governance and the transformations required if we are to move decisively in the direction of a low carbon society

Climate Change Governance Jörg Knieling, Walter Leal Filho, 2012-07-30 Climate change is a cause for concern both globally and locally In order for it to be tackled holistically its governance is an important topic needing scientific and practical consideration Climate change governance is an emerging area and one which is closely related to state and public administrative systems and the behaviour of private actors including the business sector as well as the civil society and non governmental organisations Questions of climate change governance deal both with mitigation and adaptation whilst at the

same time trying to devise effective ways of managing the consequences of these measures across the different sectors Many books have been produced on general matters related to climate change such as climate modelling temperature variations sea level rise but to date very few publications have addressed the political economic and social elements of climate change and their links with governance This book will address this gap Furthermore a particular feature of this book is that it not only presents different perspectives on climate change governance but it also introduces theoretical approaches and brings these together with practical examples which show how main principles may be implemented in practice

This book presents pioneering work on a range of innovative practices experiments and ideas that are becoming an integral part of urban climate change governance in the 21st century Theoretically the book builds on nearly two decades of scholarships identifying the emergence of new urban actors spaces and political dynamics in response to climate change priorities However it further articulates and applies the concepts associated with urban climate change governance by bridging formerly disparate disciplines and approaches Empirically the chapters investigate new multi level urban governance arrangements from around the world and leverage the insights they provide for both theory and practice Cities both as political and material entities are increasingly playing a critical role in shaping the trajectory and impacts of climate change action However their policy planning and governance responses to climate change are fraught with tension and contradictions While on one hand local actors play a central role in designing institutions infrastructures and behaviors that drive decarbonization and adaptation to changing climatic conditions their options and incentives are inextricably enmeshed within broader political and economic processes Resolving these tensions and contradictions is likely to require innovative and multi level approaches to governing climate change in the city new interactions new political actors new ways of coordinating and mobilizing resources and new frameworks and technical capacities for decision making We focus explicitly on those innovations that produce new relationships between levels of government between government and citizens and among governments the private sector and transnational and civil society actors A more comprehensive understanding is needed of the innovative approaches being used to navigate the complex networks and relationships that constitute contemporary multi level urban climate change governance Debra Roberts Co Chair Working Group II IPCC 6th Assessment Report AR6 and Acting Head Sustainable and Resilient City Initiatives Durban South Africa Climate Change in Cities offers a refreshingly frank view of how complex cities and city processes really are Christopher Gore Associate Professor and Chair Department of Politics and Public Administration Ryerson University Canada This book is a rare and welcome contribution engaging critically with questions about cities as central actors in multilevel climate governance but it does so recognizing that there are lessons from cities in both the Global North and South Harriet Bulkeley Professor of Geography Durham University United Kingdom This timely collection provides new insights into how cities can put their rhetoric into action on the ground and explores just how this promise can be realised in cities across the world from California to Canada India to Indonesia **Transformative Climate Governance** Katharina Hölscher,Niki Frantzeskaki,2020-08-26 How to progress climate science to be policy relevant and actionable This book presents a novel framework to give a positive vision and structuring approach to guide research and practice on transformative climate governance to shift the narrative from apathy and stalemate to action and transformation Our vision contrasts existing climate governance and associated lock ins that signify the institutional resistance to change To effectively address climate change climate governance itself needs to be transformed to foster sustainability transitions under climate change The book brings together a collection of case studies to

investigate how capacities for transformative climate governance are developing at multiple scales and how they can be strengthened vis vis existing governance regimes Specifically it sheds light on the following questions What are key overarching conditions actors and activities that facilitate governance for transformation under climate change Given persistent climate governance lock ins what needs to happen in research and policy to build up the capacities that transform climate governance and ensure effective climate action

[The Adaptive Challenge of Climate Change](#) Karen O'Brien,Elin

Selboe,2015-08-07 This book presents a new perspective on adaptation to climate change It considers climate change as more than a problem that can be addressed solely through technical expertise Instead it approaches climate change as an adaptive challenge that is fundamentally linked to beliefs values and worldviews as well as to power politics identities and interests Drawing on case studies from high income countries the book argues that it is time to consider adaptation to climate change as a challenge of social personal and political transformations The authors represent a variety of fields and perspectives illustrating the importance of interdisciplinary approaches to the problem The book will be of interest to researchers policymakers and advanced students in the environmental sciences social sciences and humanities as well as to decision makers and practitioners interested in new ideas about adapting to climate change

[The Governance of Climate Change Adaptation in Ten OECD Countries](#) Anja Bauer,Judith Feichtinger,Reinhard Steurer,2013

The governance of climate change adaptation gained increasing attention among both policy makers and researchers in recent years Nevertheless it is still largely unclear how governments aim to develop and implement adaptation policies This paper takes stock of respective governance approaches at the national level in ten OECD countries It first introduces four governance challenges that play a key role in the literature i e i how to better integrate adaptation policies horizontally across policy sectors and ii vertically across jurisdictional levels iii how to deal with uncertainties and integrate knowledge in adaptation policy decisions and iv how to involve non state stakeholders in adaptation decisions Based on a desk research and a telephone survey the paper then highlights a plethora of governance approaches the selected governments employ to cope with these four challenges Overall it is shown that most governance approaches are restricted to soft voluntary ways of coordination and steering and that national adaptation strategies often mark a centre piece around which complex governance setups emerge

Urban Climate Challenge Craig Johnson,Noah Toly,Heike Schroeder,2015-02-20 Drawing upon a variety of empirical and theoretical perspectives The Urban Climate Challenge provides a hands on perspective about the political and technical challenges now facing cities and transnational urban networks in the global climate regime Bringing together experts working in the fields of global environmental governance urban sustainability and climate change this volume explores the ways in which cities transnational urban networks and global policy institutions are repositioning themselves in relation to this changing global policy environment Focusing on both Northern and Southern experience across the globe three questions that have strong bearing on the ways in which we understand and assess the changing relationship between cities

and global climate system are examined. The Urban Climate Challenge will be of interest to scholars of urban climate policy, global environmental governance and climate change. It will be of interest to readers more generally interested in the ways in which cities are now addressing the inter related challenges of sustainable urban growth and global climate change.
