Sherry Y. Chen, George D. Magoulas, 2005-01-01 Annotation Hypermedia systems may be one of the most significant contributions to the Internet in recent years. This powerful new technology has revolutionized the delivery of e content through the Internet. Adaptable and Adaptive Hypermedia Systems examines both types of new hypermedia systems, discussing the benefits, impacts and implications of both. This book covers the most current issues in the field while providing insight into analytical and architectural aspects of the topic.

The Practical Handbook of

Internet Computing Munindar P. Singh, 2004-09-29 The Practical Handbook of Internet Computing analyzes a broad array of technologies and concerns related to the Internet, including corporate intranets. Fresh and insightful articles by recognized experts address the key challenges facing Internet users, designers, integrators and policymakers. In addition to discussing major applications, it also covers the architectures, enabling technologies, software, utilities and engineering techniques that are necessary to conduct distributed computing and take advantage of Web based services. The Handbook provides practical advice based upon experience, standards and theory. It examines all aspects of Internet computing in wide area and enterprise settings, ranging from innovative applications to systems and utilities, enabling technologies and engineering and management. Content includes articles that explore the components that make Internet computing work, including storage servers and other systems and utilities. Additional articles examine the technologies and structures that support the Internet, such as directory services, agents and policies. The volume also discusses the multidimensional aspects of Internet applications, including mobility, collaboration and pervasive computing. It concludes with an examination of the Internet as a holistic entity with considerations of privacy and law combined with technical content.

Adaptive Hypertext and

Hypermedia Peter Brusilovski,Alfred Kobsa,Julita Vassileva,1998-02-28 Hypertext hypermedia systems and user model based adaptive systems in the areas of learning and information retrieval have for a long time been considered as two mutually exclusive approaches to information access Adaptive systems tailor information to the user and may guide the user in the information space to present the most relevant material taking into account a model of the user s goals interests and preferences Hypermedia systems on the other hand are user neutral they provide the user with the tools and the freedom to explore an information space by browsing through a complex network of information nodes Adaptive hypertext and hypermedia systems attempt to bridge the gap between these two approaches Adaptation of hypermedia systems to each individual user is increasingly needed With the growing size complexity and heterogeneity of current hypermedia systems such as the World Wide Web it becomes virtually impossible to impose guidelines on authors concerning the overall organization of hypermedia information The networks therefore become so complex and unstructured that the existing navigational tools are no longer powerful enough to provide orientation on where to search for the needed information It is also not possible to identify appropriate pre defined paths or subnets for users with certain goals and knowledge

backgrounds since the user community of hypermedia systems is usually quite inhomogeneous This is particularly true for Web based applications which are expected to be used by a much greater variety of users than any earlier standalone application A possible remedy for the negative effects of the traditional one size fits all approach in the development of hypermedia systems is to equip them with the ability to adapt to the needs of their individual users A possible way of achieving adaptivity is by modeling the users and tailoring the system s interactions to their goals tasks and interests In this sense the notion of adaptive hypertext hypermedia comes naturally to denote a hypertext or hypermedia system which reflects some features of the user and or characteristics of his system usage in a user model and utilizes this model in order to adapt various behavioral aspects of the system to the user This book is the first comprehensive publication on adaptive hypertext and hypermedia It is oriented towards researchers and practitioners in the fields of hypertext and hypermedia information systems and personalized systems It is also an important resource for the numerous developers of Web based applications The design decisions adaptation methods and experience presented in this book are a unique source of ideas and techniques for developing more usable and more intelligent Web based systems suitable for a great variety of users The practitioners will find it important that many of the adaptation techniques presented in this book have proved to be efficient and are ready to be used in various applications

People and Computers XV — Interaction without Frontiers Ann Blandford,Jean Vanderdonckt,Phil Gray,2011-06-27 In 2001 AFIHM and the British HCI Group combined their annual conferences bringing together the best features of each organisation s separate conference series and providing a special opportunity for the French and English speaking HCI communities to interact This volume contains the full papers presented at IHM HCI 2001 the 15th annual conference of the British HCI group a specialist group of the British Computer Society and the 14th annual conference of the Association Francophone d interaction Homme Machine an independent association for any French speaking person who is interested in Human Computer Interaction Human Computer Interaction is a discipline well suited to such a multi linguistic and multi cultural conference since it brings together researchers and practitioners from a variety of disciplines with very different ways of thinking and working As a community we are already used to tackling the challenges of working across such boundaries dealing with the problems and taking advantage of the richness of the resulting insights interaction without frontiers The papers presented in this volume cover all the main areas of HCI research but also focus on considering the challenges of new applications addressing the following themes Enriching HCI by crossing national linguistic and cultural boundaries Achieving greater co operation between disciplines to deliver usable useful and exciting design solutions Benefiting from experience gained in other application areas Transcending interaction constraints through the use of novel technologies Supporting mobile users
