**Algorithms in Java** Robert Sedgewick,2000 **Algorithms in Java, Parts 1-4** Robert Sedgewick,2002-07-23 This edition of Robert Sedgewick s popular work provides current and comprehensive coverage of important algorithms for Java programmers Michael Schidlowsky and Sedgewick have developed new Java implementations that both express the methods in a concise and direct manner and provide programmers with the practical means to test them on real applications Many new algorithms are presented and the explanations of each algorithm are much more detailed than in previous editions A new text design and detailed innovative figures with accompanying commentary

greatly enhance the presentation. The third edition retains the successful blend of theory and practice that has made Sedgewick's work an invaluable resource for more than 400 000 programmers. This particular book, Parts 1-4, represents the essential first half of Sedgewick's complete work. It provides extensive coverage of fundamental data structures and algorithms for sorting, searching, and related applications. Although the substance of the book applies to programming in any language, the implementations by Schidlowsky and Sedgewick also exploit the natural match between Java classes and abstract data type (ADT) implementations. Highlights Java class implementations of more than 100 important practical algorithms. Emphasis on ADTs, modular programming, and object-oriented programming. Extensive coverage of arrays, linked lists, trees, and other fundamental data structures. Thorough treatment of algorithms for sorting, selection, priority queue, ADT implementations, and symbol table ADT implementations. Search algorithms. Complete implementations for binomial queues, multiway radix sorting, randomized BSTs, splay trees, skip lists, multiway tries, B-trees, extendible hashing, and many other advanced methods. Quantitative information about the algorithms that gives you a basis for comparing them. More than 1 000 exercises and more than 250 detailed figures to help you learn properties of the algorithms. Whether you are learning the algorithms for the first time or wish to have up-to-date reference material that incorporates new programming styles with classic and new algorithms, you will find a wealth of useful information in this book.

The focus this time is on graph algorithms, which are increasingly critical for a wide range of applications such as network connectivity, circuit design, scheduling, transaction processing, and resource allocation. In this book, Sedgewick offers the same successful blend of theory and practice that has made his work popular with programmers for many years. Michael Schidlowsky and Sedgewick have developed concise new Java implementations that both express the methods in a natural and direct manner and also can be used in real applications. *Algorithms in Java, Third Edition, Part 5: Graph Algorithms* is the second book in Sedgewick's thoroughly revised and rewritten series. The first book, Parts 1-4, addresses fundamental algorithms, data structures, sorting, and searching. A forthcoming third book will focus on strings, geometry, and a range of advanced algorithms. Each book's expanded coverage features new algorithms and implementations, enhanced descriptions and diagrams, and a wealth of new exercises for polishing skills. The natural match between Java classes and abstract data type (ADT) implementations makes the code more broadly useful and relevant for the modern object-oriented programming environment.
