Physical Laboratory Manual (Classic Reprint) E. L. Chaffee,2015-07-03 Excerpt from Physical Laboratory Manual This manual has been adapted particularly to the present equipment and requirements of a course in experimental physics in Harvard College known as Physics C This course is accompanied by a series of illustrated lectures to the class as a whole two each Week and one hour each week of recitation and problem work to the class in small sections A knowledge of algebra and plane geometry and a slight acquaintance with the notation of trigonometry are necessary Familiarity with the use of logarithms or the slide rule is strongly recommended for reducing the labor of computation The course should properly be preceded by a more elementary course in physics Small type has been used for a few descriptive and explanatory sections of the text which are not immediate parts of the specific directions of the experiments The small type does not however signify relative unimportance of the material Introductory remarks setting forth the application of the principles involved precede each experiment or each group of experiments involving the same principles In writing this manual some material for which much indebtedness is expressed has been freely taken from Professor Sabine's Laboratory Course in Physical Measurements For two reasons a revision of this book has become necessary The distribution of time in Physics C has been so altered that the laboratory work now occupies a shorter time than formerly and the exercises have therefore become unduly long It is also desirable to include a wider variety of experiments in the manual so as to fit the somewhat different needs of the various classes of students who use it In the course of the revision many experiments have been altered where experience has shown
