Nijholt,2019-05-25 This is the first book on brain computer interfaces BCI that aims to explain how these BCI interfaces can be used for artistic goals Devices that measure changes in brain activity in various regions of our brain are available and they make it possible to investigate how brain activity is related to experiencing and creating art Brain activity can also be monitored in order to find out about the affective state of a performer or bystander and use this knowledge to create or adapt an interactive multi sensorial audio visual tactile piece of art Making use of the measured affective state is just one of the possible ways to use BCI for artistic expression We can also stimulate brain activity It can be evoked externally by exposing our brain to external events whether they are visual auditory or tactile Knowing about the stimuli and the effect on the brain makes it possible to translate such external stimuli to decisions and commands that help to design implement or adapt an artistic performance or interactive installation Stimulating brain activity can also be done internally Brain activity can be voluntarily manipulated and changes can be translated into computer commands to realize an artistic vision The chapters in this book have been written by researchers in human computer interaction brain computer interaction neuroscience psychology and social sciences often in cooperation with artists using BCI in their work It is the perfect book for those seeking to learn about brain computer interfaces used for artistic applications Brain-Computer Interfaces Aboul Ella

Hassanien,Ahmad Taher Azar,2014-11-01 The success of a BCI system depends as much on the system itself as on the user s ability to produce distinctive EEG activity BCI systems can be divided into two groups according to the placement of the electrodes used to detect and measure neurons firing in the brain These groups are invasive systems electrodes are inserted directly into the cortex are used for single cell or multi unit recording and electrocorticography EcoG electrodes are placed on the surface of the cortex or dura noninvasive systems they are placed on the scalp and use electroencephalography EEG or magnetoencephalography MEG to detect neuron activity The book is basically divided into three parts The first part of the book covers the basic concepts and overviews of Brain Computer Interface The second part describes new theoretical developments of BCI systems The third part covers views on real applications of BCI systems **Documentation Abstracts**
