

# Alternative compactification scheme (braneworld)

A diagram of a cylinder representing compactified extra dimensions. It features several vertical blue lines with arrows pointing up and down, and several vertical red lines with arrows pointing up and down. A green band is wrapped around the middle of the cylinder.

**Kaluza-Klein compactification**  
Homogeneous in the direction of extra-dimensions.

Blue: EM flux line  
 $F \propto 1/r^2$

Red: gravity flux line  
 $F \propto 1/r^{D-2}(\text{short})$   
 $1/r^2$  (long)

A diagram of a braneworld. A yellow rectangular plane represents the brane. Blue lines with arrows are shown originating from and terminating on the plane, representing fields localized to the brane. Red lines with arrows are shown originating from a point on the plane and extending away from it into the surrounding space, representing gravity propagating in the higher-dimensional bulk.

**Braneworld**  
Only gravity propagates in Higher dimensional spacetime.

Standard model fields are localized on the brane.  
-otherwise, contradiction with observation.

Gravity naturally propagates in higher dimensional spacetime.

Since experimental constraints on gravity force are weak, relatively large extradimensions are allowed.  $\sim 0.1\text{mm}$

## **Brane Localized Gravity:**

*Brane-localized Gravity* Philip D. Mannheim, 2005 This timely and valuable book provides a detailed pedagogical introduction and treatment of the brane localized gravity program of Randall and Sundrum in which gravitational signals are able to localize around our four dimensional world in the event that it is a brane embedded in an infinitely sized higher dimensional anti de Sitter bulk space A completely self contained development of the material needed for brane world studies is provided for both students and workers in the field with a significant amount of the material being previously unpublished Particular attention is given to issues not ordinarily treated in the brane world literature such as the completeness of tensor gravitational fluctuation modes the causality of brane world propagators and the status of the massless graviton fluctuation mode in brane worlds in which it is not normalizable

## **Experimental Probes of Localized Gravity**, 2000 The phenomenology of the Randall Sundrum model of localized gravity is analyzed in detail for the

two scenarios where the Standard Model SM gauge and matter fields are either confined to a TeV scale 3 brane or may propagate in a slice of five dimensional anti deSitter space In the latter instance the authors derive the interactions of the graviton gauge and fermion Kaluza Klein KK states The resulting phenomenological signatures are shown to be highly dependent on the value of the 5 dimensional fermion mass and differ substantially from the case where the SM fields lie on the TeV brane In both scenarios they examine the collider signatures for direct production of the graviton and gauge KK towers as well as their induced contributions to precision electroweak observables These direct and indirect signatures are found to play a complementary role in the exploration of the model parameter space In the case where the SM field content resides on the TeV brane they show that the LHC can probe the full parameter space and hence will either discover or exclude this model if the scale of electroweak physics on the 3 brane is less than 10 TeV They also show that spontaneous electroweak symmetry breaking of the SM must take place on the TeV brane

String Theory And Cosmology - Proceedings Of The Nobel Symposium 127 Ulf Danielsson, A Goobar, B E W Nilsson, 2005-08-02 The Nobel Symposium in 2003 on String Theory and Cosmology was a gathering of many of the most active and distinguished scientists in the world including Stephen Hawking 2004 Nobel Prize winner David Gross and Andrei Linde The experts comprising both theoreticians and experimentalists were given the opportunity to discuss the present status of their respective subjects Throughout the symposium special attention was given to the connections between the fields the questions posed ranged from Can cosmology be used to test string theory to Can string theory answer deep questions about cosmology The symposium marked a new era in the understanding of the science of the very small and the very large This book is a unique document that reflects upon the state of fundamental physics at a historically important moment in time

**Advances in String Theory** Eric R. Sharpe, Arthur Greenspoon, 2008 Over the past decade string theory has had an increasing impact on many areas of physics high energy and hadronic physics gravitation and cosmology mathematical physics and even condensed matter physics The impact has been through many major conceptual and methodological developments in quantum field theory in the past fifteen years In addition string theory has exerted a dramatic influence on developments in contemporary mathematics including Gromov Witten theory mirror symmetry in complex and symplectic geometry and important ramifications in enumerative geometry This volume is derived from a conference of younger leading practitioners around the common theme What is string theory The talks covered major current topics both mathematical and physical related to string theory Graduate students and research mathematicians interested in string theory in mathematics and physics will be interested in this workshop
