Branches Philip Ball, 2009-09-10 As part of a trilogy of books exploring the science of patterns in nature acclaimed science writer Philip Ball here looks at the form and growth of branching networks in the natural world and what we can learn from them Many patterns in nature show a branching form trees river deltas blood vessels lightning the cracks that form in the glazing of pots These networks share a peculiar geometry finding a compromise between disorder and determinism though some like the hexagonal snowflake or the stones of the Devil's Causeway fall into a rigidly ordered structure Branching networks are found at every level in biology from the single cell to the ecosystem Human made networks too can come to share the same features and if they don't then it might be profitable to make them do so nature's patterns tend to arise from economical solutions

Patterns in Nature Philip Ball, 2016-04-05 The acclaimed science writer curates a visually striking riotously colorful photographic display of physical patterns in the natural world Publishers Weekly starred review Though at first glance the natural world may appear overwhelming in its diversity and complexity there are regularities running through it from the hexagons of a honeycomb to the spirals of a seashell and the branching veins of a leaf Revealing

the order at the foundation of the seemingly chaotic natural world Patterns in Nature explores not only the math and science but also the beauty and artistry behind nature's awe inspiring designs Unlike the patterns we create natural patterns are formed spontaneously from the forces that act in the physical world Very often the same types of pattern and form such as spirals stripes branches and fractals recur in places that seem to have nothing in common as when the markings of a zebra mimic the ripples in windblown sand But many of these patterns can be described using the same mathematical and physical principles giving a surprising unity to the kaleidoscope of the natural world Richly illustrated with 250 color photographs and anchored by accessible and insightful chapters by esteemed science writer Philip Ball Patterns in Nature reveals the organization at work in vast and ancient forests powerful rivers massing clouds and coastlines carved out by the sea By exploring similarities such as the branches of a tree and those of a river network this spectacular visual tour conveys the wonder beauty and richness of natural pattern formation

The Self-made Tapestry Philip Ball, 2001 Why do similar patterns and forms appear in nature in settings that seem to bear no relation to one another The windblown ripples of desert sand follow a sinuous course that resembles the stripes of a zebra or a marine fish In the trellis like shells of microscopic sea creatures we see the same angles and intersections as for bubble walls in a foam The forks of lightning mirror the branches of a river or a tree This book explains why these are no coincidences Nature commonly weaves its tapestry by self organization employing no master plan or blueprint but by simple local interactions between its component parts be they grains of sand diffusing molecules or living cells give rise to spontaneous patterns that are at the same time complex and beautiful Many of these patterns are universal spirals spots and stripes branches honeycombs Philip Ball conducts a profusely illustrated tour of this gallery and reveals the secrets of how nature's patterns are made

Nature's Patterns Philip Ball, 2011 [The Nature and Science of Patterns](#) Jane Burton, Kim Taylor, 1998 Describes the wide variety of patterns found throughout the plant and animal world including the petals of flowers stripes of zebras and scales of cones

Abstraction in Art and Nature Nathan Cabot Hale, 2012-06-19 In this stimulating thought provoking guide a noted sculptor and teacher demonstrates how to discover a rich new design source in the abstractions inherent in natural forms Through systematic study of such properties as line form shape mass pattern light and dark space proportion scale perspective and color as they appear in nature students can learn to utilize the infinite variety and diversity of those elements as a wellspring of creative abstraction The author invites students to learn the necessary techniques through a series of projects devoted to exploring and drawing plants animals birds landscapes seascapes skies and more Lines of growth and structure water and liquid forms weather and atmospheric

patterns luminosity in plants and animals earth colors and lightning are among the sources of abstraction available to the artist who is aware of them This book will train you to see and use these elements and many more An intriguing blend of art psychology and the natural sciences Abstraction in Art and Nature is profusely illustrated with over 370 photographs scientific illustrations diagrams and reproductions of works by the great masters It not only offers a mind stretching new way of learning and teaching basic design but deepens our awareness of the natural environment In short Mr Hale s book is an indispensable guide that artists teachers and students will want to have close at hand for instruction inspiration and practical guidance
