See what's in the LaunchPad **Mathematics for Economics and Finance** Michael Harrison, Patrick Waldron, 2011-03-31. The aim of this book is to bring students of economics and finance who have only an introductory background in mathematics up to a quite advanced level in the subject thus preparing them for the core mathematical demands of econometrics, economic theory, quantitative finance and mathematical economics which they are likely to encounter in their final year courses and beyond. The level of the book will also be useful for those embarking on the first year of their graduate studies in Business, Economics or Finance. The book also serves as an introduction to quantitative economics and finance for mathematics students at undergraduate level and above. In recent years mathematics graduates have been increasingly expected to have skills in practical subjects such as economics and finance just as economics graduates have been expected to have an increasingly strong grounding in mathematics. The authors avoid the pitfalls of many texts that become too theoretical. The use of mathematical methods in the real world is never lost sight of and quantitative analysis is brought to bear on a variety of topics including foreign exchange rates and other macro level issues.

*The British National Bibliography* Arthur James Wells, 2009 *The ABCs of RBCs* George McCandless, 2009-07-01. The first book to provide a basic introduction to Real Business Cycle (RBC) and New Keynesian models is designed to teach the economic practitioner or student how to build simple RBC models. Matlab code for solving many of the models is provided and careful readers should be able to construct, solve and use their own models.
