Jürgen Valldorf,Wolfgang Gessner,2005-12-19 Since 1995 the annual international forum on Advanced Microsystems for Automotive Applications AMAA has been held in Berlin The event offers a unique opportunity for microsystems component developers system suppliers and car manufacturers to show and to discuss competing technological approaches of microsystems based solutions in vehicles The book accompanying the event has demonstrated to be an efficient instrument for the diffusion of new concepts and technology results The present volume including the papers of the AMAA 2005 gives an overview on the state of the art and outlines imminent and mid term R D perspectives The 2005 publication reflects as in the past the current state of discussions within industry More than the previous publications the AMAA 2005 goes back to the technological requirements and indispensable developments for fulfilling the market needs The large part of contributions dealing with sensors as well as sensor technologies and data fusion is exemplary for this tendency In this context a paradigm shift can be stated In the past the development focused predominantly on the detection and processing of single parameters originating from single sensors Today the challenge increasingly consists in getting information of complex situations with a series of variables from different sensors and in evaluating this information Smart integrated devices using the information deriving from the various sensor sources will be able to describe and assess a traffic situation or behaviour much faster and more reliable than a human being might be able to do Additional information is available on www.amaa.de

Advanced Microsystems for Automotive Applications 2009 Gereon Meyer,Jürgen Valldorf,Wolfgang Gessner,2009-04-15 The current economic crisis is cutting the automotive sector to the quick Public authorities worldwide are now faced with requests for providing loans and accepting guarantees and even for putting large automotive companies under state control Assessing the long term benefits of such help and weighing the needs of different sectors against each other poses a major challenge for the national policies Given the upcoming change of customer preferences and state regulations towards safety sustainability and comfort of a car the automotive industry is particularly called to prove its ability to make necessary innovations available in order to accelerate its pace to come out of the crisis Consequently the Green Car is assuming a prominent role in the current debate Various power train concepts are currently under discussion for the Green Car including extremely optimised internal

combustion engines hybrid drives and battery electric traction Electrical cars are the most appealing option because they are free of local emissions and provide the opportunity to use primary energy from sources other than crude oil for transport Well to wheel analysis show that their green house gas emissions can be rated negligibly small if electricity from renewable sources like wind and solar is used **Advanced Microsystems for Automotive Applications** ,2000 *Advanced Microsystems for Automotive Applications* 99 Detlef E.
